Homebound status: Due to diagnosis of Age-Related Osteoporosis With Current Pathological Fracture, Right Femur, Subsequent Encounter For Fracture With Routine Healing, the patient is experiencing decreased endurance and mobility, increasing the likelihood of falls. To safely leave their home, the patient needs assistance from another person and an assistive mobility device.

Clinical Condition Requiring Homecare: The patient is a female referred to home health services following hospitalization and rehabilitation for a right femur fracture status post open reduction and internal fixation (ORIF). Past medical history includes hypertension and diabetes mellitus. The patient has three right hip/lateral thigh surgical incisions, all of which are healed, and reports occasional urinary incontinence; skin remains intact. She presents with moderate right lower extremity edema and pain and is primarily wheelchair-bound, requiring assistance with transfers, wheelchair mobility, and activities of daily living. She is able to ambulate with a walker under close supervision, limited to 50% weight-bearing as tolerated, and ambulated approximately 50 feet during the visit with contact guard assist. The patient was instructed in therapeutic exercises including long arc quadriceps, seated marching, and standing right side kicks and marching, performed for two sets of 10 repetitions. Her husband, who assists with ADLs, IADLs, meal preparation, shopping, and errands, was present during the visit and educated on blood thinner injection administration, demonstrating understanding and willingness to administer as prescribed. Orders include skilled nursing with recommended frequency of 1 visit per week for 4 weeks, next visit scheduled Wednesday, as well as PT/OT evaluations and referral for continued home health services.
