14. DME and Supplies: bath bench, cane					15. Safety Measures: medication safety, fall precautions, diabetic precautions, ambulates with device, standard precautions, bathroom safety, activity supervision				
16. Nutrition: diabetic					17. Allergies: ampicillin				
18.A. Functional Limitations Ambulation					18.B. Activities Permitted No Restrictions				
19. Mental & Psychosocial Status: COGNITION: 0. Alert/ oriented, able to focus and shift attention, comprehends and recalls task directions independently., ANXIETY: 0. Never, SOCIAL ISOLATION: 0. Never, BEHAVIORAL ISSUES: 7. None of the above behaviors demonstrated, HISTORY OF DEPRESSION: No									
20. Prognosis: fair									
22. A Rehabilitation Potential: SELF-CARE: 3. Independent - Patient completed all the activities by him/herself, with or without an assistive device, with no assistance from a helper., MOBILITY: 3. Independent - Patient completed all the activities by him/herself, with or without an assistive device, with no assistance from a helper.					22.B.Discharge Plans patient will be responsible for managing treatment family/caregiver will be responsible for managing treatment				
Homebound status: Due to diagnosis of Essential Primary Hypertension, the patient is experiencing decreased endurance and mobility, increasing the likelihood of falls. To safely leave their home, the patient needs assistance from another person and an assistive mobility device.									
Clinical Condition Requiring Homecare: The patient is a 73-year-old Caucasian female with a past medical history notable for osteoarthritis, type 2 diabetes mellitus, hypertension, neuropathic pain, vertigo, and a history of keratosis. She was hospitalized for sudden onset of blurry vision, dizziness, and ambulatory dysfunction and subsequently completed a subacute rehabilitation stay; she now presents for home care. She resides in a two-story family home with her two adult sons (not present during this visit) and is currently sleeping on the couch for ease of access. On assessment, she is alert and oriented 4, denies shortness of breath, nausea, and vomiting, and reports intermittent dizziness attributable to vertigo. Vital signs are: T 97.7F, BP 155/89 mmHg, HR 79 bpm, RR 18/min, and Sp<mh class="chrome-extension-FindManyStrings chrome-extension-FindManyStrings-style-15 CE-FMS-O2">O2</mh> 95% on room air. Lungs are clear to auscultation bilaterally; bowel sounds are active; skin is warm, dry, and intact. She demonstrates +2 bilateral lower-extremity edema; leg elevation when seated was reinforced Functionally, she is morbidly obese with generalized weakness and ambulates with a cane; however, gait is unsteady and cane use is deemed unsafe-she and her son are reviewing rollator options for purchase since insurance will not cover one. Timed Up and Go (TUG) was documented as 1.35 (reported in the note as "1.35," interpreted by therapy as high fall risk/poor coordination); this will be rechecked to confirm seconds at subsequent visits. A home exercise program was initiated and reviewed, including ankle pumps, long-arc quadriceps, seated marching, and knee abduction/adduction; the patient demonstrated understanding. Education was provided on fall prevention, safe device use (with recommendation to transition to a rollator for stability), edema management via elevation, and the importance of logging symptoms and blood pressure trends. She was advised to schedule a primary care follow-up within 30 days for medication review, blood pressure management, fall-risk reassessment, and evaluation of persistent dizziness. The plan of care includes continued skilled nursing for monitoring and education reinforcement and skilled PT/OT to address decreased strength, balance, standing tolerance, upper-extremity conditioning, functional transfers, and gait safety to reduce fall risk and support a return toward prior level of function. Date of Order 08/11/2025 Orders Physician Face-to-Face Date: 07/29/2025 Clinical Condition Requiring Home Care per Certifying Physician: sn-disease management pt-eval & treat ot-eval & treat hha-adl 's due to Essential Primary <mh class="chrome-extension-FindManyStrings chrome-extension-FindManyStrings-style-10 CE-FMS-Hypertension">Hypertension</mh> Homebound Status per Certifying Physician: patient requires another person or medical equipment such as crutches, a walker, or a wheelchair to leave home -1 - SOC - SN Notes: PT Eval Notes: OT Eval Notes: Physician Mcneal, Arnelle
