Z79.891		Long term (current) use of opiate analgesic		10/01/25	
14. DME and Supplies:				15. Medications: Dose/Frequency/Route (N)ew (C)hanged	
None of the above				Gabapentin - Gabapentin 300 mg take 600 mg tablet by mouth twice a day	
				"I take it for neuropathy" 2 pills 2x daily	
				Sodium Chloride - Sodium Chloride 4 mL nebulization Nasal every 6 hours "I	
				take it 1s a day. When I Don't take it, I get UTIS"	
				Extra Strength Tylenol - Acetaminophen 500mg by mouth twice a day "I	
				take it as needed for pain"	
				Melatonin - Melatonin take 3 mg tablet by mouth once a day "I take it for	
				sleep"	
				Uroxatral - Alfuzosin Hydrochloride 10 mg by mouth Bladder control	
				supplement 1x daily	
				Vitamin D - Ergocalciferol 50,000 International Units sublingual once a day	
				Supplement	
				ipratropium-albuterol sulfate 3 mL, inhalation inhalant every 6 hours Taken	
				as needed	
				tamsulosin take 0.4 mg tablet by mouth once a day Teaching required	
				Oxycodone - Ibuprofen: Oxycodone Hydrochloride take 2.5 mg tablet by	
				mouth every 6 hours Taken as needed for pain	
				vit C,E-Zn-coppr-lutein-zeaxan take 1 capsule by mouth twice a day	
				Supplement	
15. Safety Measures:					
ambulates with device, wheelchair precautions, , no stair use, activity supervision					
16. Nutrition:				17. Allergies:	
regular				no known allergies	
18.A. Functional Limitations				18.B. Activities Permitted	
Bowel/Bladder Incontinence, Dyspnea With Minimal Exertion, Endurance				Walker, Up As Tolerated	
19. Mental & COGNITION: 1. Requires prompting (cuing, repetition, reminders) only under stressful or unfamiliar conditions., ANXIETY: 1. In new or complex situations only, Psychosocial Status: SOCIAL ISOLATION: 2. Sometimes, BEHAVIORAL ISSUES: 7. None of the above behaviors demonstrated, HISTORY OF DEPRESSION: No					
20. Prognosis: fair					
22. A Rehabilitation Potential:				22.B.Discharge Plans	
SELF-CARE: 2. Needed Some Help - Patient needed partial assistance from another person to complete any activities., MOBILITY: 2. Needed Some Help - Patient needed partial assistance from another person to complete any activities.				another facility/provider will be responsible for managing treatment	
				patient will be responsible for managing treatment	
Homebound status: Due to diagnosis of Urinary Tract Infection Site Not Specified, the patient is experiencing decreased endurance and mobility, increasing the likelihood of falls. To safely leave their home, the patient needs assistance from another person and an assistive mobility device.					
Clinical Condition Requiring Homecare: <div>The patient is an 85-year-old male with a past medical history significant for renal cell carcinoma status post left nephrectomy with urinary retention, chronic obstructive pulmonary disease (COPD), chronic low back pain secondary to lumbar spondylosis and spinal stenosis with claudication, Schatzki ring, mild dementia, obstructive sleep apnea managed with CPAP, and benign prostatic hyperplasia (BPH). He was recently hospitalized for a urinary tract infection and is now receiving skilled home health services following discharge. Upon <mh class="chrome-extension-FindManyStrings chrome-extension-FindManyStrings-style-8 CE-FMS-assessment">assessment</mh>, the patient was alert and oriented to person, place, and time but presented with notable weakness and fatigue. He resides in an independent senior living community where a nurse is available on-site if needed. The patient was met in the nurse's office and assisted back to his apartment in a wheelchair, where he required moderate to maximal assistance for transfers and standing balance. He demonstrates poor standing tolerance and requires moderate assistance to transition from sitting to standing. Bed mobility and transfers were not fully assessed during this visit due to fatigue. The patient is currently nonambulatory but is able to self-propel his manual wheelchair independently on indoor surfaces. He has multiple assistive devices at home, including a manual wheelchair, single cane, straight cane, rolling walker, and rollator. He reports difficulty with independent mobility and standing without the use of assistive devices, often requiring support from his nephew, who serves as his primary caregiver. The patient becomes short of breath with exertion and wears a prescribed pain patch for chronic back pain management. The on-site nurse and evaluating clinician agree that the patient would significantly benefit from 24-hour caregiver support to assist with activities of daily living (ADLs) and mobility due to safety concerns and his current level of physical dependence. During the visit, the patient was assisted to bed and made comfortable. Education was provided on energy conservation, safe use of assistive devices, and the importance of adequate caregiver assistance. Medication review was completed, and the patient was reminded of proper medication timing and adherence. The plan of care includes continued skilled nursing for ongoing <mh class="chrome-extension-FindManyStrings chrome-extension-FindManyStrings-style-8 CE-FMS-assessment">assessment</mh>, medication management, and symptom monitoring, along with skilled physical therapy to address deficits in strength, balance, endurance, and functional mobility to promote independence and a safe return to prior level of function.</div><div> </div><div> </div><div>Date of Order</div><div>10/01/2025</div><div>Orders</div><div>Physician Face-to-Face Date: 09/25/2025</div><div>Clinical Condition Requiring Home Care per Certifying Physician: SN disease management PT eval and treat OT eval and treat due to Urinary Tract Infection Site Not Specified</div><div>Homebound Status per Certifying Physician: patient requires another person or medical equipment such as crutches, a walker, or a wheelchair to leave home</div><div> </div><div> </div><div>1 - SOC - SN Notes: soc</div><div>PT Eval Notes:</div><div>OT Eval Notes:</div><div> </div><div>Physician</div><div>Hurwitz, David</div></div>
