14. DME and Supplies: cane, walker, bath bench			15. Safety Measures: infectious material management, , knee precautions, , bathroom safety, ambulates with assistance, activity supervision		
16. Nutrition: Z. NO PHYSICIAN-ORDERED DIET			17. Allergies: shellfish		
18.A. Functional Limitations Ambulation, Endurance			18.B. Activities Permitted Exercises Prescribed, Up As Tolerated		
19. Mental & Pyschosocial Status: COGNITION: 0. Alert/ oriented, able to focus and shift attention, comprehends and recalls task directions independently., ANXIETY: 0. Never, SOCIAL ISOLATION: 0. Never, BEHAVIORAL ISSUES: 7. None of the above behaviors demonstrated, HISTORY OF DEPRESSION: No					
20. Prognosis: good					
22. A Rehabilitation Potential: SELF-CARE: 3. Independent - Patient completed all the activities by him/herself, with or without an assistive device, with no assistance from a helper., MOBILITY: 3. Independent - Patient completed all the activities by him/herself, with or without an assistive device, with no assistance from a helper.			22.B.Discharge Plans patient will be responsible for managing treatment		
Homebound status: After undergoing Right Total Knee Arthroplasty, the patient is experiencing decreased endurance and mobility, increasing the likelihood of falls. To safely leave their home, the patient needs assistance from another person and an assistive mobility device.					
Clinical Condition Requiring Homecare: The patient is an 81-year-old female who underwent a right total knee arthroplasty (R TKA) this week. Prior to surgery she ambulated without an assistive device but was limited by pain and intermittently used a single-point cane (SPC). On initial physical therapy evaluation she demonstrates decreased strength and range of motion in the left knee with manual muscle testing approximately 3-/5 and active range of motion of flexion to 80 and extension from -15 to neutral. She requires contact guard assist (CGA) for transfers and for short-distance ambulation with a rolling walker (RW), and requires bilateral handrail support for stair negotiation. PT interventions during this session included instruction and practice in stair negotiation sequencing, gait training focused on normalizing step length and coordinating RW use, and functional transfer training. The patient was educated to use ice for 20 minutes after exercise and to elevate the right lower extremity (RLE) for pain and edema control. On inspection the surgical incision is covered with a dressing that appears clean and dry; the dressing is to be removed on postoperative day 7 per current plan. (No vital signs or medication list were documented in this PT note.) The patient would benefit from continued skilled physical therapy to increase knee strength and range of motion, improve endurance and safety with transfers/ambulation and stairs, and to restore independence to prior level of function (PLOF). The plan is to proceed with skilled PT services, implement the home exercise program and edema/pain-control measures provided, and reassess progress toward functional goals. Date of Order 10/23/2025 Orders Physician Face-to-Face Date: 10/15/2025 Clinical Condition Requiring Home Care per Certifying Physician: PT-eval & treat due to Right Total Knee Arthroplasty Homebound Status per Certifying Physician: patient requires another person or medical equipment such as crutches, a walker, or a wheelchair to leave home 1 - SOC - PT Notes: soc Physician Apostolides, George
