14. DME and Supplies: sock aid, cane, bath bench, grab bars, 4 wheeled walker				15. Safety Measures: walker precautions, standard precautions, fall precautions, ambulates with device		
16. Nutrition: Z. NO PHYSICIAN-ORDERED DIET				17. Allergies: bee venom poison ivy penicillin tolterodine		
18.A. Functional Limitations Ambulation, Endurance				18.B. Activities Permitted Walker, Exercises Prescribed, Transfer bed/Chair, Up As Tolerated		
19. Mental & Pyschosocial Status: COGNITION: 0. Alert/ oriented, able to focus and shift attention, comprehends and recalls task directions independently., ANXIETY: 0. Never, SOCIAL ISOLATION: 0. Never, BEHAVIORAL ISSUES: 7. None of the above behaviors demonstrated, HISTORY OF DEPRESSION: No						
20. Prognosis: good						
22. A Rehabilitation Potential: SELF-CARE: 3. Independent - Patient completed all the activities by him/herself, with or without an assistive device, with no assistance from a helper., MOBILITY: 3. Independent - Patient completed all the activities by him/herself, with or without an assistive device, with no assistance from a helper.				22.B.Discharge Plans family/caregiver will be responsible for managing treatment		
Homebound status: Due to diagnosis of Sciatica right side, the patient is experiencing decreased endurance and mobility, increasing the likelihood of falls. To safely leave their home, the patient needs assistance from another person and an assistive mobility device.						
Clinical Condition Requiring Homecare:	<p class="MsoNoSpacing">The patient is a 99-year-old female with a medical history significant for anemia, arthritis, breast cancer, left foot drop, gout, hyperlipidemia, hypertension, overactive bladder, and prior cerebrovascular accident. She presents to home health following a recent hospital admission for severe right hip osteoarthritis. The patient resides in a single-level home with one step to enter the sunroom, where she spends most of her time; her son resides with her and provides daily assistance, while her daughter visits weekly to help with bathing. Assessment revealed limitations in standing balance, functional mobility, strength, and endurance, with right hip range of motion and strength restricted due to pain, particularly during transitional movements such as sit-to-stand. She is currently able to stand and transfer independently with or without a rollator, negotiate a single step with supervision, and ambulate indoors using a rollator with supervision. Outdoor ambulation and car transfers were not assessed. The TUG score was 56 seconds, indicating a high fall risk. The home exercise program, including supine, seated, and standing exercises, as well as ambulation for endurance, was reviewed. Recommendations were made for a second rollator in the sunroom, removal of shower doors with replacement by a curtain, and use of an appropriate tub transfer bench. The family is very supportive, and starting in January, the patient's insurance will cover a home health aide. The patient will benefit from skilled therapy to address deficits, promote independence, and support a safe return to her prior level of function.</o:p></o:p></p> <p class="MsoNoSpacing"><o:p> </o:p></p> <p class="MsoNoSpacing">Date of Order<o:p></o:p></p> <p class="MsoNoSpacing">11/18/2025 <o:p></o:p></p> <p class="MsoNoSpacing">Order<o:p></o:p></p> <p class="MsoNoSpacing">Physician Face-to-Face Date: 11/04/2025 Clinical Condition Requiring Home Care per Certifying Physician: PT evaluate and treat DX: Sciatica right side Homebound Status per Certifying Physician: patient requires another person or medical equipment such as crutches, a walker, or a wheelchair to leave home<o:p></o:p></p> <p class="MsoNoSpacing"> 1 - SOC - PT Notes:<o:p></o:p></p> <p class="MsoNoSpacing">Physician: Ankrom, Michael</p>
