8. DOB 11/03/1939 9.Sex Male				10. Medications: Dose/Frequency/Route (N)ew (C)hanged	
11. ICD	Principal Diagnosis		Date	Rocephin - Ceftriaxone Sodium Inject 2 g into the vein every 24 hours. intravenous once a day Inject 2 g into the vein every 24 hours Bumetanide - Bumetanide 1 MG tablet, Take 1 tablet by mouth as necessary Take 1 tablet by mouth daily. (Taking 1 tablet [1mg] on MWF and 2 tablets [2mg] on Sun, Tues, Thurs and Sat) For diagnoses: Complete heart block (CMS/HHSHCC), Nonrheumatic aortic valve stenosis Commonly known as: BUMEX Calcitriol - Calcitriol 0.25 MCG capsule, Take 0.25 mcg by mouth threee times per week Take 0.25 mcg by mouth every monday, wednesday & friday. Eliquis - Apixaban 2.5 MG , Take 2.5 mg tablet by mouth twice a day Take 2.5 mg by mouth 2 times daily. Irbesartan - Irbesartan 150 MG tablet, Take 150 mg by mouth at bedtime Jardiance - Empagliflozin 10 MG Tabs tablet, Take 10 mg by mouth once a day Levothyroxine - Levothyroxine Sodium 50 MCG tablet, Take 50 mcg by mouth once a day Metamucil - Senna Take by mouth (Tablet) by mouth in the evening Metformin - Metformin Hydrochloride 500 MG tablet, Take 1,000 mg by mouth in the evening Take 1,000 mg by mouth every evening. (2 tablets) Metoprolol Succinate - Metoprolol Succinate 50 MG tablet, Take 50 mg by mouth in the evening 50 MG tablet extended release 24 HR Olopatadine Hydrochloride - Olopatadine Hydrochloride 0.2 % Soln, Place 1 drop both eyes twice a day Polyethylene Glycol - Polyethylene Glycol 3350: Potassium Chloride: Sodium Bicarbonate: Sodium Chloride 17 g packet, Take 17 g by mouth in the evening Take 17 g by mouth every evening. Stir and dissolve 1 packet in any 4-8 ounces of noncarbonated beverage Rosuvastatin Calcium - Rosuvastatin Calcium 10 MG tablet, TAKE ONE TABLET by mouth once a day TAKE ONE TABLET DAILY CHOLESTEROL For diagnoses: Peripheral arterial disease (CMSHCC), Hyperlipidemia, unspecified hyperlipidemia type Commonly known as: CRESTOR Spironolactone - Spironolactone 25 MG tablet, Take 1 tablet by mouth once a day Tamsulosin Hydrochloride - Tamsulosin Hydrochloride 0.4 MG capsule, Take 1 capsule by mouth once a day Vitamin D - Ergocalciferol Tablet by mouth once a day Systane - Normal Saline 0.4-0.3 % Soln, Place 1 drop both eyes as necessary Place 1 drop into both eyes 2 times daily as needed. Nystatin - Nystatin 100000 UNIT/GM Powd powder, Apply 1 Application to the skin topical as necessary Normal Saline Flush - Normal Saline 10ml intravenous once a day Flush IV with NSS pre/post IV antibiotic administration and blood draw.

Homebound status: Due to diagnosis of Pneumonia Due To Other Specified Bacteria, the patient is experiencing decreased endurance and mobility, increasing the likelihood of falls. To safely leave their home, the patient needs assistance from another person and an assistive mobility device.

Clinical Condition <div>The patient is an 86-year-old male with a medical history significant for hyperlipidemia, hypertension, congestive heart failure (CHF), obstructive sleep apnea (OSA), spinal stenosis, pneumonia, and venous insufficiency. He resides in an apartment with elevator access alongside his partner, Anna, who serves as his primary caregiver. The patient was recently discharged home following hospitalization for pneumonia and is currently receiving intravenous antibiotic therapy via a peripherally inserted central catheter (PICC) line for ongoing infection management. The prescribed regimen includes ceftriaxone 2 g administered intravenously once daily for seven weeks. The skilled nurse reviewed medication administration procedures with both the patient and caregiver, demonstrating proper technique for PICC line flushing using 5-10 mL of normal saline before and after antibiotic administration, ensuring all clamps are open during infusion. The caregiver is scheduled to return-demonstrate IV administration at the next nursing visit. Lab work is to be collected every Monday, with all necessary supplies and labeled shipping materials available in the home. The PICC line, located in the right upper arm, was assessed as patent with no signs of infection or abnormal bleeding. During assessment, the patient was alert and oriented 3-4 and denied dizziness, chest pain, or shortness of breath. Physical findings revealed bilateral lower extremity edema, more pronounced on the left. The caregiver reported that the left leg appears weaker than before, possibly due to compensatory overuse resulting from right leg discomfort. The patient also reported right knee pain; he recently received a gel injection from his orthopedic provider. Since returning home, the patient has had limited ambulation, relying primarily on his rollator, which his partner has often used to assist with mobility. In recent days, however, slight improvement in movement has been noted. The patient also exhibits mild tremors in his hands. Physical therapy evaluation noted decreased lower extremity strength-graded 2-/5 in the right leg and 3/5 in the left leg-resulting in limited weight-bearing ability on the right and an inability to ambulate independently. The patient currently requires minimal assistance for transfers. Skilled physical therapy is indicated to address decreased strength, impaired balance, and reduced functional mobility to restore the patient to his prior level of function. Occupational therapy evaluation recommends a frequency of 2w3 to provide ADL retraining, therapeutic exercise, home exercise program instruction, functional mobility training, and safety education to enhance independence in daily activities. The patient and caregiver were educated on infection prevention measures, <mh class="chrome-extension-FindManyStrings chrome-extension-FindManyStrings-style-8 CE-FMS-standard%20precautions">standard precautions</mh>, medication management, and the importance of mobility and lower extremity strengthening exercises. Both demonstrated understanding and engagement in the education provided. The plan of care includes continued skilled nursing for PICC line management, infection monitoring, and IV antibiotic administration supervision, along with ongoing physical and occupational therapy to improve strength, mobility, and functional independence while minimizing fall risk and complications related to immobility.</div><div></div><div>

PARAMETERS FOR PHYSICIAN NOTIFICATION: temperature < 95 > 100.5, heart rate < 50 > 110, respiratory rate < 8 > 22, blood pressure systolic < 90 > 169, blood pressure diastolic < 60 > 90, O2 saturation < 88 > 100, pain < 0 > 5

CAREGIVER: 1. Non-agency caregiver(s) currently provide assistance

HOSPITALIZATION RISKS: 7. Currently taking 5 or more medications

STANDING ORDERS: infection control: hygiene, proper hand washing; advance directive: plan if patient is unable to make healthcare decisions ; fall precautions: wear sensible shoes, remove home hazards, living space adequately lit, assistive devices prn; emergency preparedness: plan for prn evacuation, resumption of home health visits; Skin Preservation: Measures to prevent skin breakdown; pressure relief, incontinence care, nutrition, hydration ; Pain: Pain management measures; pain medication, rest, body alignment, ROM, meditation, massage ; Medications: Medication actions, uses, frequency, dose, interactions of all new/change meds
Advance Directive:No Advance Directive

PROBLEMS IDENTIFIED ON ASSESSMENT: M2020 - Oral Med Management, meal preparation, M2102f - Patient Supervision, M2102d - Caregiver Performs Treatment, M1400 - Dyspnea, abnormal blood pressure, abn cholesterol > 200 mg/dL, abnormal BS < 70/140 > mg/dL, abnormal thyroid <> 0.40 - 4.50 mIU/mL (EM), limited endurance, muscle weakness, limited strength, swelling of affected area, balance deficit, obesity

PROCEDURES: Blood Draw: Skilled nurse for Lab draws: cbc with diff, cmp, esr, crp weekly & fax to 410-427-2587 pharmacy: umms health solutions 443-462-5850, Medication Review: : Medications reviewed with patient/caregiver, cough/deep breathing exercises, incentive spirometer, apply anti-embolic stockings, train caregiver(s) to perform medical/rehabilitation treatments, coordinate/arrange for adequate patient supervision, coordinate/arrange preparation of missing meals, infusion therapy: Clean port with alcohol swab IV: ceftriaxone 2gm daily for 30 minutes, via picc. Flush with 10cc NSS pre/post IV antibiotic administration and pre/post blood draw. Place cap. Skilled nurse to change PICC dressing weekly using aseptic technique, apply Biopatch or equivalent.

TEACH PATIENT/CAREGIVER: * lifestyle modifications to manage cardiac condition including symptom management diet changes regular exercise getting enough sleep, related medication(s) purpose, schedule, * how to take the patient's blood pressure record the reading, related medication(s) purpose, schedule, * lifestyle modifications to manage respiratory condition including diet changes

SN Goals

PATIENT-STATED GOAL: To get strength from 2 weeks ago, with ambulation

GOALS

patient/caregiver recalls

- * how to take the patient's blood pressure
- * record the reading
- * recalls related medication(s) purpose, schedule

patient/caregiver recalls

- * lifestyle modification to manage blood condition including dietary changes
- * bleeding precautions
- * recalls related medication(s) purpose, schedule

patient/caregiver recalls

- * lifestyle modifications to manage peripheral vascular condition including how to apply compression stockings
- * physical exercise plan
- * diet
- * recalls related medication(s) purpose, schedule

patient/caregiver recalls

- * diabetic medication management
- * blood sugar testing
- * diabetic foot care
- * exercise
- * diabetic diet
- * recalls related medication(s) purpose, schedule

patient/caregiver recalls

- * how to promote optimized mobility with strength
- * balance
- * dexterity
- * range-of-motion therapeutic exercises
- * promotion of peripheral circulation
- * fluid and diet intake to promote healing
- * prevent constipation
- * recalls related medication(s) purpose, schedule

patient/caregiver recalls

- * low cholesterol dietary guidelines
