22. A Rehabilitation Potential: SELF-CARE: 2. Needed Some Help - Patient needed partial assistance from another person to complete any activities., MOBILITY: 2. Needed Some Help - Patient needed partial assistance from another person to complete any activities.			22.B.Discharge Plans patient will be responsible for managing treatment		
Homebound status: After undergoing Left Total Knee Replacement surgery, the patient is experiencing decreased endurance and mobility, increasing the likelihood of falls. To safely leave their home, the patient needs assistance from another person and an assistive mobility device.					
Clinical Condition Requiring Homecare: <p class="MsoNoSpacing">The patient is a 63-year-old female status post left total knee replacement on 1/5/26, who returned home on 1/6/26 with continuous assistance from her spouse, Bill, who provides support with all ADLs and IADLs. The patient is alert and oriented 3 and reports left knee pain rated at 7/10, managed with Tylenol 500 mg and oxycodone 5 mg taken at 3:00 AM. She denies shortness of breath and reports nausea that is improving. A nonremovable dressing is present on the left knee with noted swelling. The patient ambulates using a rolling walker for safety. Skilled nursing reviewed all medications and provided education on effective pain management and nausea relief, with the patient and spouse verbalizing understanding. Physical therapy evaluation was completed, revealing decreased endurance, left knee strength, functional mobility, balance, and safety awareness, with an unsteady gait, difficulty with transfers and stair negotiation, and increased fall risk. The patient requires assistance and an assistive device to safely leave the home. Education was provided regarding edema management, including lower extremity elevation above heart level during rest and the use of compression garments as recommended by the physician, as well as signs and symptoms of incision infection. Home safety and fall prevention strategies were reviewed, and the patient was instructed in safe transfers using a walker, including proper hand and foot placement and forward weight shift. The patient required minimal assistance to standby assistance for safe transfers. The patient will benefit from skilled home physical therapy services to improve strength, mobility, balance, ambulation safety, and independence, as she is at risk for falls and further functional decline without continued skilled intervention.</p></o:p></p> <p class="MsoNoSpacing"><o:p> </o:p></p> <p class="MsoNoSpacing">Date of Order<o:p></o:p></p> <p class="MsoNoSpacing">01/07/2026 Order<o:p></o:p></p> <p class="MsoNoSpacing">Physician Face-to-Face Date: 12/10/2025 Clinical Condition Requiring Home Care per Certifying Physician: SN-pain control PT-eval & treat due to Left Total Knee Replacement surgery Homebound Status per Certifying Physician: patient requires another person or medical equipment such as crutches, a walker, or a wheelchair to leave home<o:p></o:p></p> <p class="MsoNoSpacing"> 1 - SOC - SN Notes:<o:p></o:p></p> <p class="MsoNoSpacing">PT Eval Notes:<o:p></o:p></p> <p class="MsoNoSpacing">Physician: Huang, James</p>
