Z79.899	Other long term (current) drug therapy	01/15/26

10. Medications: Dose/Frequency/Route (N)ew (C)hanged

Levothyroxine - Levothyroxine Sodium 0137 mcg, oral tablet by mouth once a day 137 mcg, oral, Daily
Risperidone - Risperidone 1 mg 1 Tablet by mouth twice a day Mood swing
Quetiapine Fumarate - Quetiapine Fumarate 25 mg 25 mg0.5 tab by mouth at bedtime Mood swing
Atorvastatin - Atorvastatin Calcium 20 mg 1 tab by mouth in the morning HLD
Amphetamine-Dextroamphetamine Oral Tablet 5 MG (Amphetamine-Dextroamphetamine) 5 mg by mouth once a day Neurotransmitters
Trazodone - Trazodone Hydrochloride 50 mg 1 tab by mouth at bedtime Insomnia
Fluoxetine - Fluoxetine Hydrochloride eq 10 mg base 1 Tablet by mouth twice a day Depression
Rytary - Carbidopa: Levodopa 23.75-95 mg 2 tabs by mouth four times a day Parkinson

14. DME and Supplies:

walker, hospital bed, hand held shower, commode, cane

15. Safety Measures:

emergency phone # clearly displayed, , walker precautions, , hand rails, , diabetic precautions, bedrails up while in bed, ambulates with device, ambulates with assistance

16. Nutrition:

diabetic

17. Allergies:

sertraline tamsulosin

18.A. Functional Limitations

Ambulation, Endurance

18.B. Activities Permitted

Walker, Cane, Up As Tolerated

19. Mental & Pyschosocial Status: COGNITION: 0. Alert/ oriented, able to focus and shift attention, comprehends and recalls task directions independently., ANXIETY: 0. Never, SOCIAL ISOLATION: 0. Never, BEHAVIORAL ISSUES: 7. None of the above behaviors demonstrated, HISTORY OF DEPRESSION: Yes

20. Prognosis: good

22. A Rehabilitation Potential:

SELF-CARE: 2. Needed Some Help - Patient needed partial assistance from another person to complete any activities., MOBILITY: 2. Needed Some Help - Patient needed partial assistance from another person to complete any activities.

22.B.Discharge Plans

family/caregiver will be responsible for managing treatment

Homebound status: Due to diagnosis of Metabolic Encephalopathy, the patient is experiencing decreased endurance and mobility, increasing the likelihood of falls. To safely leave their home, the patient needs assistance from another person and an assistive mobility device.

Clinical Condition Requiring Homecare:

The patient is a 63-year-old White male with a recent hospitalization for altered mental status and anxiety, subsequently transferred to rehabilitation and now admitted to home health services with a primary diagnosis of Parkinson's disease. Past medical history is significant for hypothyroidism, gastroesophageal reflux disease (GERD), and hyperlipidemia. The patient resides in a multi-level single-family home with his wife and multiple pets. He currently has a private caregiver Monday through Friday from 8:00 a.m. to 1:00 p.m., which, per the patient's wife, is a temporary arrangement. The wife and private aide were present during the visit and actively involved in care. On <mh class="chrome-extension-FindManyStrings chrome-extension-FindManyStrings-style-8 CE-FMS-assessment">assessment</mh>, the patient was alert, awake, and oriented to person, place, time, and situation. He wears prescription glasses and is hard of hearing. Neurological <mh class="chrome-extension-FindManyStrings chrome-extension-FindManyStrings-style-8 CE-FMS-assessment">assessment</mh> revealed positive facial symmetry, pupils equal, round, and reactive to light, and bilateral upper extremity strength with equal hand grasps. The patient demonstrates uncontrolled shaking and muscle rigidity consistent with Parkinson's disease, contributing to unsteady and festinating gait patterns. He requires moderate assistance and supervision for safety due to impaired balance and gait instability and was encouraged to consistently use assistive devices. The patient ambulates independently indoors and outdoors with a rollator for balance and safety and is independent with all transfers; however, supervision remains necessary due to fall risk. Cardiopulmonary <mh class="chrome-extension-FindManyStrings chrome-extension-FindManyStrings-style-8 CE-FMS-assessment">assessment</mh> revealed posterior lung lobes clear to auscultation bilaterally without use of accessory muscles. No edema was noted in the bilateral lower extremities. Abdominal <mh class="chrome-extension-FindManyStrings chrome-extension-FindManyStrings-style-8 CE-FMS-assessment">assessment</mh> revealed a distended, soft, and non-tender abdomen with active bowel sounds in all four quadrants. The patient is continent of bowel and bladder. He reported intermittent abdominal pain, which is effectively relieved with prescribed medication. The patient is able to feed himself with setup assistance, and medications are prepared by his wife, though he manages oral medications independently once prepared. Functionally, the patient is independent in basic activities of daily living, including grooming, dressing, bathing, toileting, and meal management, though supervision is required for safety related to Parkinson's disease symptoms, including hypertonicity, muscle rigidity, stiffness, and gait disturbances. The wife has ordered orthotic rocker sole shoes to promote improved toe-off and foot clearance during ambulation. A physical therapy evaluation was completed during this visit. A home exercise program was initiated, focusing on seated and standing therapeutic exercises targeting core/abdominal strength and bilateral lower extremity strengthening. Education was provided to both the patient and his wife regarding proper performance and safety with exercises. Both verbalized understanding and demonstrated exercises appropriately. The patient would benefit from continued skilled physical therapy services to improve strength, functional mobility, standing and ambulation tolerance, gait efficiency, balance, and overall safety in order to maximize independence and facilitate return to prior level of function.
 Date of Order 01/15/2026 Orders Physician Face-to-Face Date:

23. Signature and Date of Verbal SOC Where Applicable:

Electronically Signed by Messick, Charles RN on 01/15/2026
