20. Prognosis: poor					
22. A Rehabilitation Potential:			22.B.Discharge Plans		
SELF-CARE: , MOBILITY:			family/caregiver will be responsible for managing treatment patient to receive home care indefinitely		
Homebound status: Due to diagnosis of Urinary Tract Infection Site Not Specified, the patient is experiencing decreased endurance and mobility, increasing the likelihood of falls. To safely leave their home, the patient needs assistance from another person and an assistive mobility device.					
Clinical Condition <div>The patient resides with cousins in a single-family ranch-style home without steps and currently sleeps in a queen-sized bed. Requiring Homecare:The patient requires total assistance with all activities of daily living (ADLs), and a hospital bed is recommended to facilitate safe and effective personal care, as turning and repositioning are very difficult for the caregiver, who also has health concerns. The caregiver reported that the patient experienced a fall on 9/15, requiring 911 assistance, and the patient has since complained of pain and soreness. The physician referred the patient to home health services. A 16 Fr Foley catheter was placed during the visit, with urine noted to be brown in color; an order is needed for a urine specimen to rule out urinary tract infection. The skilled nurse educated the caregiver on Foley catheter care, including how to empty the urine bag and recognize symptoms to report to the agency. The caregiver demonstrated understanding through return demonstration. Redness and rash were observed in the perineal, groin, and anal areas, likely contact dermatitis related to urine exposure, as well as a facial rash. Skilled nursing is scheduled for six weeks for ongoing assessment, education, disease management, and Foley care/teaching. Referrals for PT and OT evaluations and a home health aide to assist with ADLs were initiated. At present, the patient is dependent with ADLs but was previously able to assist with dressing, bathing, and perform stand-pivot transfers before the fall. The patient is able to follow one-step directions.</div><div> </div><div> </div><div>Date of Order</div><div>01/14/2026</div><div>Orders</div><div>Physician Face-to-Face Date: 09/16/2025</div><div>Clinical Condition Requiring Home Care per Certifying Physician: SN-disease management, Verbal Order for PT/OT Evaluation and Home Health Aide due to Urinary Tract Infection Site Not Specified</div><div>Homebound Status per Certifying Physician: patient requires another person or medical equipment such as crutches, a walker, or a wheelchair to leave home</div><div> </div><div> </div><div>4 - Recertification Notes: The patient is currently unable to move independently and has a catheter, 18french, 30 cc balloon.</div><div>Physician</div><div>Kreynovich Np, Slava</div></div>
