M19.90			Unspecified osteoarthritis unspecified site		
H52.203			Unspecified astigmatism bilateral		
Z79.82			Long term (current) use of aspirin		
Z86.0100			Personal history of colonic polyps		
14. DME and Supplies:			15. Safety Measures:		
hand held shower, grab bars, cane			hand rails, , diabetic precautions, ambulates with assistance		
16. Nutrition:			17. Allergies:		
diabetic			sulfa shellfish		
18.A. Functional Limitations			18.B. Activities Permitted		
Ambulation, Endurance			Cane, Up As Tolerated		
19. Mental & COGNITION: 0. Alert/ oriented, able to focus and shift attention, comprehends and recalls task directions independently., ANXIETY: 0. Never, SOCIAL ISOLATION: 0. Psychosocial Status: Never, BEHAVIORAL ISSUES: 7. None of the above behaviors demonstrated, HISTORY OF DEPRESSION: No					
20. Prognosis: good					
22. A Rehabilitation Potential:			22.B.Discharge Plans		
SELF-CARE: 3. Independent - Patient completed all the activities by him/herself, with or without an assistive device, with no assistance from a helper., MOBILITY: 3. Independent - Patient completed all the activities by him/herself, with or without an assistive device, with no assistance from a helper.			family/caregiver will be responsible for managing treatment patient will be responsible for managing treatment		
Homebound status: Due to diagnosis of Normal Pressure Hydrocephalus, the patient is experiencing decreased endurance and mobility, increasing the likelihood of falls. To safely leave their home, the patient needs assistance from another person and an assistive mobility device.					
Clinical Condition Requiring Homecare: The patient is a 74-year-old Asian male who was admitted to the hospital for a planned surgical procedure and observation and is now status post right ventriculoperitoneal (VP) shunt placement performed on 02/06 for idiopathic normal pressure hydrocephalus. His past medical history is significant for hypertension, hyperlipidemia, hypercholesterolemia, type II diabetes mellitus, diverticulosis, and unspecified osteoarthritis. He was discharged home to his wife, who is a physician and serves as his primary caregiver. The patient resides with his wife and family in a multilevel single-family home. On <mh class="chrome-extension-FindManyStrings chrome-extension-FindManyStrings-style-8 CE-FMS-assessment">assessment</mh>, the patient was alert and oriented to person, place, time, and situation. He wears glasses and denies hearing impairment. Neurological examination revealed intact facial symmetry, equal and strong bilateral hand grasps, and pupils equal, round, and reactive to light. He denies headaches, visual changes beyond baseline, or new neurological deficits. Respiratory <mh class="chrome-extension-FindManyStrings chrome-extension-FindManyStrings-style-8 CE-FMS-assessment">assessment</mh> demonstrated clear posterior lung fields to auscultation without use of accessory muscles. Cardiovascular <mh class="chrome-extension-FindManyStrings chrome-extension-FindManyStrings-style-8 CE-FMS-assessment">assessment</mh> revealed no bilateral lower extremity edema. The abdomen was soft, non-tender, with bowel sounds present in all four quadrants. The patient is continent of bowel and bladder. Surgical incisions were assessed and include a lower abdominal incision measuring approximately 7 cm x 0.2 cm, a right neck incision measuring 0.2 cm x 4 cm, and a right cranial C-shaped incision measuring approximately 0.2 cm x 6 cm. All incisions were observed to be clean, dry, and intact, without signs or symptoms of infection such as erythema, warmth, drainage, or dehiscence. Continued monitoring for proper healing and signs of shunt-related complications is indicated. The patient reports pain at a level of 4/10, which is adequately managed with acetaminophen taken twice daily, providing satisfactory relief. Immunizations are up to date, including influenza vaccination in November 2025 and current pneumococcal vaccination. Functionally, the patient presents with fair to fair-plus bilateral lower extremity strength and mobility. He ambulates with an unsteady gait and uses a cane outdoors; gait training with a rolling walker and quad cane was provided during the visit to improve safety. He is independent with feeding once meals are set up but requires assistance from his wife with medication management and meal preparation. He performs grooming, dressing, bathing, and toileting largely independently, requiring occasional physical assistance. He is independent with transfers but requires pushing off from chair arms or nearby surfaces for sit-to-stand transitions. A physical therapy evaluation was completed, and a home exercise program consisting of seated and standing bilateral lower extremity therapeutic exercises was initiated to address strength, balance, and endurance deficits. Education was provided regarding safe home setup, fall prevention strategies, and appropriate use of assistive devices for ambulation. The patient demonstrated understanding through verbalization and return demonstration and agreed with the plan of care. Skilled physical therapy services are medically necessary to improve strength, standing and ambulation tolerance, gait stability, and overall functional mobility in order to facilitate return to prior level of function, maximize safety within the multilevel home environment, and reduce the risk of falls or rehospitalization. Date of Order 02/10/2026 Orders Physician Face-to-Face Date: 02/06/2026 Clinical Condition Requiring Home Care per Certifying Physician: SN-disease management PT-eval & treat OT-eval & treat due to Normal Pressure Hydrocephalus Homebound Status per Certifying Physician: patient requires another person or medical equipment such as crutches, a walker, or a wheelchair to leave home 1 - SOC - SN Notes: soc PT Eval Notes: OT Eval Notes: Physician Al-Shaar, Abdel
