14. DME and Supplies: ostomy supplies					15. Safety Measures: smoke detectors , medication safety, fall precautions, ambulates with assistance, emergency phone # clearly displayed, supervision at all times, transfer with assist, standard precautions, bathroom safety, activity supervision				
16. Nutrition: regular					17. Allergies: Chlorhexidine Gluconate				
18.A. Functional Limitations Bowel/Bladder Incontinence, , Endurance, Ambulation					18.B. Activities Permitted Exercises Prescribed, Up As Tolerated				
19. Mental & Pyschosocial Status: COGNITION: 0. Alert/ oriented, able to focus and shift attention, comprehends and recalls task directions independently., ANXIETY: 0. Never, SOCIAL ISOLATION: 0. Never, BEHAVIORAL ISSUES: 7. None of the above behaviors demonstrated, HISTORY OF DEPRESSION: No									
20. Prognosis: good									
22. A Rehabilitation Potential: SELF-CARE: 2. Needed Some Help - Patient needed partial assistance from another person to complete any activities., MOBILITY: 2. Needed Some Help - Patient needed partial assistance from another person to complete any activities.					22.B.Discharge Plans family/caregiver will be responsible for managing treatment				
Homebound status: Due to diagnosis of Encounter for surgical aftercare following surgery on the digestive system, the patient is experiencing decreased endurance and mobility, increasing the likelihood of falls. To safely leave their home, the patient needs assistance from another person and an assistive mobility device.									
Clinical Condition Requiring Homecare:		<p class="MsoNoSpacing">The patient is a 62-year-old male with a complex surgical and oncologic history, initially treated in March 2024 for diverticulitis complicated by a colovesical fistula requiring sigmoid colectomy and fistula takedown, followed by a postoperative course complicated by an anastomotic leak and pelvic abscess necessitating reoperation with colostomy creation. His recovery was prolonged due to a wound infection requiring wound VAC therapy, but he returned to baseline by August 2024. In February 2025, a planned colostomy reversal was aborted after discovery of an anal mass, with biopsy confirming invasive HPV-related squamous cell carcinoma; subsequent PET imaging showed localized disease without metastasis. He completed chemoradiation from March to May 2025, with follow-up studies in October and November 2025 showing no evidence of recurrence. The patient was seen today for an initial skilled nursing visit following hospitalization and abdominal surgery on March 4, 2026, for colostomy closure, low anterior resection, and creation of a diverting loop ileostomy. He currently has a midline abdominal incision with 33 staples, a left-sided ileostomy, and a right-sided Jackson-Pratt drain, and he successfully demonstrated proper management of both. He resides in a condominium with a live-in friend who serves as his caregiver, is full code, has no known drug allergies, and has all prescribed medications available at home; his surgical incision is left open to air, with staples scheduled for removal at a postoperative appointment.<o:p></o:p></p><p class="MsoNoSpacing"><o:p>&nbsp;</o:p></p><p class="MsoNoSpacing">Bottom of Form<o:p></o:p></p><p class="MsoNoSpacing"><o:p>&nbsp;</o:p></p><p class="MsoNoSpacing">Date of Order<o:p></o:p></p><p class="MsoNoSpacing">03/14/2026
