18.A. Functional Limitations Ambulation							18.B. Activities Permitted Walker, Transfer bed/Chair, Up As Tolerated						
19. Mental & Pyschosocial Status: COGNITION: 1. Requires prompting (cuing, repetition, reminders) only under stressful or unfamiliar conditions., ANXIETY: 1. In new or complex situations only, SOCIAL ISOLATION: 0. Never, BEHAVIORAL ISSUES: 7. None of the above behaviors demonstrated, HISTORY OF DEPRESSION: Yes													
20. Prognosis: good													
22. A Rehabilitation Potential: SELF-CARE: 3. Independent - Patient completed all the activities by him/herself, with or without an assistive device, with no assistance from a helper., MOBILITY: 3. Independent - Patient completed all the activities by him/herself, with or without an assistive device, with no assistance from a helper.							22.B.Discharge Plans family/caregiver will be responsible for managing treatment						
Homebound status: Due to diagnosis of Parkinson's Disease With Dyskinesia With Fluctuations, the patient is experiencing decreased endurance and mobility, increasing the likelihood of falls. To safely leave their home, the patient needs assistance from another person and an assistive mobility device.													
Clinical Condition The patient is a 78-year-old male with a past medical history significant for Parkinson's disease with dyskinesia and motor Requiring Homecare:fluctuations, <mh class="chrome-extension-FindManyStrings chrome-extension-FindManyStrings-style-16 CE-FMS-hyperlipidemia">hyperlipidemia</mh>, depressive disorder, orthostatic hypotension, and recurrent falls, who was referred by his primary care provider for skilled home health services following multiple recent falls. He presents with notable impairments in functional mobility, including bilateral lower extremity weakness (MMT 3+/5), decreased coordination, tremors, and altered gait mechanics contributing to significant gait instability and elevated fall risk. Additionally, bilateral upper extremity strength is reduced (MMT 4-/5), further impacting his ability to safely perform activities of daily living. On assessment, standing balance is graded as Fair-, requiring upper extremity support for safety. The patient requires supervision to contact guard assistance for bed mobility and transfers, including sit-to-stand and toilet transfers, with the need for verbal cueing for proper limb placement. He also requires minimal to contact guard assistance for bathing and dressing tasks, primarily due to tremors and decreased motor control, and completes showering with assistance as needed. During the evaluation, the patient ambulated approximately 20-25 feet using a rolling walker with caregiver assistance, demonstrating impaired gait and decreased endurance. The patient resides with his wife in a multi-level home equipped with a stair lift, and the home environment is noted to be well maintained without significant safety hazards. Skilled home health physical therapy is medically necessary to address deficits in strength, balance, coordination, and gait in order to improve functional mobility, enhance safety, reduce fall risk, and maximize independence within the home setting. Patient and caregiver education was provided on a home exercise program, fall prevention strategies, medication awareness, and recognition of signs and symptoms requiring physician notification. Date of Order 03/13/2026 Orders Physician Face-to-Face Date: 12/16/2025 Clinical Condition Requiring Home Care per Certifying Physician: PT, OT due to Parkinson's Disease With Dyskinesia With Fluctuations Homebound Status per Certifying Physician: patient requires another person or medical equipment such as crutches, a walker, or a wheelchair to leave home >1 - SOC - PT Notes: soc OT Eval Notes: Physician Kerkvliet, Gary
