		Athscl heart disease of native coronary artery w/o ang pctrs											03/20/26
		Chronic total occlusion of coronary artery											03/20/26
		Essential (primary) hypertension											03/20/26
		Hyperlipidemia unspecified											03/20/26
		Benign prostatic hyperplasia with lower urinary tract symp											03/20/26
		Other retention of urine											03/20/26
		Peripheral vascular disease unspecified											03/20/26
		Essential tremor											03/20/26
		Polyneuropathy unspecified											03/20/26
		Long term (current) use of antithrombotics/antiplatelets											03/20/26
Long term (current) use of aspirin					03/20/26								
Personal history of malignant neoplasm of prostate					03/20/26								
Personal history of malignant melanoma of skin					03/20/26								
Presence of urogenital implants					03/20/26								
14. DME and Supplies: wheelchair, walker, TENs unit, , reacher, hospital bed, commode,							15. Safety Measures: wheelchair precautions, walker precautions, transfer with assist, , , emergency phone # clearly displayed, , bedrails up while in bed, bathroom safety						
16. Nutrition: cardiac diet,							17. Allergies: no known allergies						
18.A. Functional Limitations Ambulation, Endurance, Bowel/Bladder Incontinence							18.B. Activities Permitted Walker, Wheelchair, Up As Tolerated						
19. Mental & Psychosocial Status: COGNITION: 0. Alert/ oriented, able to focus and shift attention, comprehends and recalls task directions independently., ANXIETY: 0. Never, SOCIAL ISOLATION: 0. Never, BEHAVIORAL ISSUES: 7. None of the above behaviors demonstrated, HISTORY OF DEPRESSION: No													
20. Prognosis: good													
22. A Rehabilitation Potential: SELF-CARE: 3. Independent - Patient completed all the activities by him/herself, with or without an assistive device, with no assistance from a helper., MOBILITY: 3. Independent - Patient completed all the activities by him/herself, with or without an assistive device, with no assistance from a helper.							22.B.Discharge Plans family/caregiver will be responsible for managing treatment patient will be responsible for managing treatment						
Homebound status: Due to diagnosis of Postprocedural hemorrhage of a circulatory system organ or structure following a cardiac catheterization, the patient is experiencing decreased endurance and mobility, increasing the likelihood of falls. To safely leave their home, the patient needs assistance from another person and an assistive mobility device.													
Clinical Condition <div>The patient is an 84-85-year-old male with a significant past medical history including coronary artery disease, <mh Requiring Homecare:chrome-extension-FindManyStrings chrome-extension-FindManyStrings-style-12 CE-FMS-hypertension">hypertension</mh>, polyneuropathy, essential tremor, history of prostate cancer, and recent gastrointestinal bleeding requiring hospitalization followed by a skilled nursing facility stay. His recent course was further complicated by a cardiac procedure with retroperitoneal bleed necessitating ICU admission, resulting in marked deconditioning. The patient currently resides alone in a single-level home and receives daily assistance from a private caregiver, with additional support from his daughter, who was present during assessment. On evaluation, the patient is alert, awake, and oriented to person, place, time, and situation. Neurologically, he demonstrates facial symmetry, pupils equal and reactive to light, and unequal hand grasps, with noted uncontrolled tremors of the upper extremities consistent with his history. Respiratory assessment reveals clear posterior lung fields without use of accessory muscles. Cardiovascular assessment is notable for bilateral lower extremity pitting edema with faint peripheral pulses; the patient is wearing TED stockings and has been instructed on lower extremity elevation. Abdominal examination reveals a distended but soft and non-tender abdomen with active bowel sounds in all four quadrants. The patient is incontinent of bowel. A Foley catheter was removed earlier in the day at a urology appointment, and the patient and daughter were instructed to monitor for adequate urinary output and signs of urinary retention. The patient is currently bedbound and requires maximal assistance for mobility, transfers, and repositioning, though he is able to feed himself with setup assistance. Skin assessment reveals heat rash on the back and excoriation to the buttocks, with associated complaints of soreness. Education was provided on frequent turning and repositioning every two hours, as well as proper incontinence care and application of moisturizing agents to maintain skin integrity and prevent further breakdown. The patient reports generalized weakness, decreased endurance, impaired balance, and significant limitations in functional mobility, placing him at high risk for falls. Physical therapy evaluation confirms deficits in strength, balance, and activity tolerance, with the patient requiring assistance for all mobility tasks. Skilled physical therapy services are indicated to address these impairments, improve safety, and promote progression toward independence with transfers and eventual ambulation within the home. A home exercise program focusing on bilateral upper extremity strengthening was initiated, and instruction was provided with fair return demonstration. A medium-resistance theraband was issued to support continued exercise. Environmental modification recommendations, including installation of a grab bar for safer shower transfers, were discussed with the patient and caregiver. Preventive care is up to date, including influenza vaccination in October 2025 and current pneumococcal vaccination. The plan of care includes continued skilled nursing and physical therapy services to monitor medical status, manage skin integrity, support continence care, advance strength and mobility, and reduce fall risk, with ongoing caregiver education to ensure safe and effective care within the home environment.</div><div> </div><div>Date of Order</div><div>03/20/2026</div><div>Orders</div><div>Physician Face-to-Face Date: 02/25/2026</div><div>Clinical Condition Requiring Home Care per

SN WK1: 1 (03/20/26-03/21/26) ,WK2: 1 (03/22/26-03/28/26) ,WK3: 1 (03/29/26-04/04/26) ,WK4: 1 (04/05/26-04/11/26)

PARAMETERS FOR PHYSICIAN NOTIFICATION: temperature < 95 > 100.5, heart rate < 50 > 110, respiratory rate < 8 > 22, blood pressure systolic < 90 > 169, blood pressure diastolic < 60 > 90, O2 saturation < 88 > 100, pain < 0 > 5

CAREGIVER: 1. Non-agency caregiver(s) currently provide assistance

HOSPITALIZATION RISKS: 2. Unintentional weight loss of a total of 10 pounds or more in the past 12 months, 3. Multiple hospitalizations (2 or more) in the past 6 months, 4. Multiple emergency department visits (2 or more) in the past 6 months, 5. Decline in mental, emotional, or behavioral status in the past 3 months, 7. Currently taking 5 or more medications, 8. Currently reports exhaustion

STANDING ORDERS: infection control: hygiene, proper hand washing; advance directive: plan if patient is unable to make healthcare decisions ; fall precautions: wear sensible shoes, remove home hazards, living space adequately lit, assistive devices prn; emergency preparedness: plan for prn evacuation, resumption of home health visits; Skin Preservation: Measures to prevent skin breakdown; pressure relief, incontinence care, nutrition, hydration; Pain: Pain management measures; pain medication, rest, body alignment, ROM, meditation, massage; Medications: Medication actions, uses, frequency, dose, interactions of all new/change meds
Advance Directive:POLST (Physician Orders for Life-Sustaining Treatment)

PROBLEMS IDENTIFIED ON ASSESSMENT: Financial, meal preparation, M2020 - Oral Med Management, M1033 - Exhaustion, M1400 - Dyspnea, M1033 - Unintentional Weight Loss, M1620 - Bowel Incontinence, M1610 - Urinary Catheter, frequent urination, swelling of affected area, muscle weakness, limited endurance, limited range of motion, limited strength, Pain Effect on Sleep, Pain Interference with Therapy activities, Pain Interference with ADLs, balance deficit

PROCEDURES: cough/deep breathing exercises: Demonstrated understanding, apply anti-embolitic stockings: Daughter managed, home exercise program: Eval and treat by therapy, coordinate/arrange preparation of missing meals: Daughter managed, coordinate/arrange access to co-pay assistance considering patient inability to pay: Daughter involved

TEACH PATIENT/CAREGIVER: * lifestyle modifications to manage respiratory condition including diet changes and regular exercise strategies to control shortness of breath home remedies to keep lungs healthy, related medication(s) purpose, schedule, * how to maintain a diary to monitor effective and non-effective pain relief including documenting time of pain, rating, precipitating events, medications, treatments, and what works best to relieve pain teach relaxation skills and diversional activities, related medication(s) purpose, schedule, * strategies to increase caloric intake, related medication(s) purpose, schedule, * bowel incontinence management including dietary changes bowel training skin care, related medication(s) purpose, schedule, * urinary catheter management including how to flush catheter change and wash drainage bags prevent infection including proper handwashing positioning of catheter, related medication(s) purpose, schedule, * strategies to minimize fatigue and exhaustion including work simplification energy conservation lifestyle changes diet, related medication(s) purpose, schedule, patient self-administers medications as prescribed, related medication(s) purpose, schedule, patient has access to co-pay assistance considering inability to pay, meal preparation is available to patient for all meals

SN Goals

PATIENT-STATED GOAL: I want to be able to get out of the bed

GOALS

patient/caregiver recalls

- * lifestyle modifications to manage respiratory condition including
- * diet changes and regular exercise
- * strategies to control shortness of breath
- * home remedies to keep lungs healthy
- * recalls related medication(s) purpose, schedule

patient/caregiver recalls

- * how to maintain a diary to monitor effective and non-effective pain relief including documenting time of pain, rating, precipitating events, medications, treatments, and what works best to relieve pain
- * teach relaxation skills and diversional activities
- * recalls related medication(s) purpose, schedule

patient/caregiver recalls

- * strategies to increase caloric intake
- * recalls related medication(s) purpose, schedule

patient/caregiver recalls

- * bowel incontinence management including dietary changes
- * bowel training
- * skin care
- * recalls related medication(s) purpose, schedule

patient/caregiver recalls

- * urinary catheter management including how to flush catheter
- * change and wash drainage bags
- * prevent infection including proper handwashing
- * positioning of catheter
- * recalls related medication(s) purpose, schedule

patient/caregiver recalls

- * strategies to minimize fatigue and exhaustion including work simplification
- * energy conservation
- * lifestyle changes
- * diet
- * recalls related medication(s) purpose, schedule

patient self-administers medications as prescribed

- * recalls related medication(s) purpose, schedule

patient has access to co-pay assistance considering inability to pay

meal preparation is available to patient for all meals
