14. DME and Supplies: bath bench, wheelchair, hospital bed									
16. Nutrition: regular, cardiac diet									
18.A. Functional Limitations Ambulation, Endurance, Bowel/Bladder Incontinence									
19. Mental & Psychosocial Status: COGNITION: 1. Requires prompting (cuing, repetition, reminders) only under stressful or unfamiliar conditions., ANXIETY: 1. In new or complex situations only, SOCIAL ISOLATION: 0. Never, BEHAVIORAL ISSUES: 7. None of the above behaviors demonstrated, HISTORY OF DEPRESSION: No									
20. Prognosis: good									
22. A Rehabilitation Potential: SELF-CARE: 1. Dependent - A helper completed all the activities for the patient., MOBILITY: 1. Dependent - A helper completed all the activities for the patient.									
22.B.Discharge Plans family/caregiver will be responsible for managing treatment family/caregiver will be responsible for managing treatment family/caregiver will be responsible for managing treatment									
Homebound status: Due to diagnosis of Acute embolism and thrombosis of unspecified deep veins of lower extremity, bilateral, the patient is experiencing decreased endurance and mobility, increasing the likelihood of falls. To safely leave their home, the patient needs assistance from another person and an assistive mobility device.									
Clinical Condition Requiring Homecare: The patient is a 66-year-old White female residing with her twin sister in a senior living community, with additional support from a daytime private aide. She was recently hospitalized following a syncopal episode, after which emergency services were activated by her sister. Her past medical history is significant for a recent large intraparenchymal hemorrhage resulting in right-sided hemiparesis, Graves' disease, obesity, and bilateral knee osteoarthritis, with associated deconditioning and functional decline. On assessment, the patient is alert and oriented to person, place, and time; however, she demonstrates mild cognitive impairment with forgetfulness and requires cueing to recall the current year and day of the week. She is easily redirected and cooperative with care. Neurologically, she presents with aphasia but is able to state her name and date of birth. Facial symmetry is intact, pupils are equal and reactive to light, and bilateral hand grasps are equal. Sensation is intact. Respiratory assessment reveals clear lung sounds without use of accessory muscles. The abdomen is distended but soft and non-tender with active bowel sounds in all four quadrants. The patient is incontinent of both bowel and bladder. Bilateral lower extremity swelling is noted to have decreased compared to prior assessments. Functionally, the patient is primarily wheelchair-dependent and requires assistance with all mobility tasks. She is able to perform limited ambulation up to approximately 30 feet using a front-wheeled walker with close supervision and frequent rest breaks due to decreased endurance and impaired motor control. Transfers, including sit-to-stand and bed-to-chair mobility, require partial to moderate assistance. She is able to feed herself with setup assistance but requires support for most other activities of daily living. The patient currently sleeps in a recliner lift chair. Durable medical equipment in place includes a wheelchair, hospital bed, and Hoyer lift; however, she would benefit from a front-wheeled walker to support mobility training. The patient reports bilateral knee pain with partial relief from prescribed medications. She demonstrates impaired strength, balance, coordination, and safety awareness, placing her at high risk for falls. Skilled physical therapy interventions have focused on therapeutic exercise, neuromuscular re-education, transfer training, gait training, and postural control to improve safety and functional independence. The patient actively participates in therapy; however, progress is limited by persistent weakness, reduced endurance, and motor control deficits. The plan of care includes continuation of skilled physical therapy to address deficits in strength, balance, and mobility, with the goal of maximizing functional recovery, improving safety, and reducing caregiver burden. Ongoing education is provided to the patient and caregivers regarding safe transfer techniques, fall prevention strategies, and proper use of assistive devices. Given her current functional limitations, need for assistance, and high fall risk, the patient is considered homebound and requires continued multidisciplinary support to maintain safety and optimize quality of life. Date of Order 03/23/2026 Orders Physician Face-to-Face Date: 03/10/2026 Clinical Condition Requiring Home Care per Certifying Physician: CVA with right hemiparesis, deconditioning due to Acute embolism and thrombosis of unspecified deep veins of lower extremity, bilateral Homebound Status per Certifying Physician: patient requires another person or medical equipment such as crutches, a walker, or a wheelchair to leave home 1 - SOC - SN Notes: soc PT Eval Notes: OT Eval Notes: Physician Prior, Clara
