14. DME and Supplies:			15. Safety Measures:		
wound care supplies, urinary/catheter supplies, oxygen supplies, hospital bed, feeding tube supplies			wheelchair precautions, supervision at all times, , , , infectious material management, hand rails, , , aspiration precautions, activity supervision		
16. Nutrition:			17. Allergies:		
pureed, G-Tube			no known allergies		
18.A. Functional Limitations			18.B. Activities Permitted		
Ambulation, Endurance, Bowel/Bladder Incontinence			Exercises Prescribed, Wheelchair		
19. Mental & Pyschosocial Status:			COGNITION: 2. Requires assistance and some direction in specific situations (for example, on all tasks involving shifting of attention) or consistently requires low stimulus environment due to distractibility, ANXIETY: 3. During the day and evening, but not constantly, SOCIAL ISOLATION: 8. Patient unable to respond, BEHAVIORAL ISSUES: 1. Memory deficit: failure to recognize familiar persons/places, inability to recall events of past 24 hours, significant memory loss so that supervision is required, HISTORY OF DEPRESSION: Yes		
20. Prognosis:			fair		
22. A Rehabilitation Potential:			22.B.Discharge Plans		
SELF-CARE: 1. Dependent - A helper completed all the activities for the patient., MOBILITY: 1. Dependent - A helper completed all the activities for the patient.			family/caregiver will be responsible for managing treatment		
Homebound status:			Due to diagnosis of Disruption Of External Operation Wound, Not Elsewhere Classified, Initial Encounter, the patient is experiencing decreased endurance and mobility, increasing the likelihood of falls. To safely leave their home, the patient needs assistance from another person and an assitive mobility device.		
Clinical Condition <div>The patient is a 73-year-old male recently discharged from hospitalization and rehabilitation following lumbar decompression and fusion performed on 11/25, complicated by subsequent lumbar incision and debridement. His postoperative course is notable for a chronic back wound currently managed with daily iodoform packing, as well as incontinence-associated dermatitis to the buttocks treated with barrier cream. The patient has a complex past medical history including chronic obstructive pulmonary disease requiring continuous oxygen at 2 L/min, osteomyelitis of the vertebra, type 2 diabetes mellitus, hyperlipidemia, benign prostatic hyperplasia, neurogenic bladder with a 14 Fr 10 cc indwelling Foley catheter in place, anemia, cardiac sarcoidosis with liver involvement, essential hypertension, atrial fibrillation, dysphagia status post gastrostomy tube placement, and prior cervical spine surgery complicated by infection requiring implantation of antibiotic beads. The patient was observed during the visit to be sleeping but easily arousable, with oxygen saturation of 96% on 2 L via nasal cannula and no reported shortness of breath. Physical assessment revealed the lumbar incision without a dressing; wound care was performed without complication, although the wound bed was not fully visualized and continues to demonstrate undermining from the 12 o'clock to 3 o'clock positions. The Foley catheter was noted to be draining clear yellow urine. The gastrostomy tube was intact, with separate ports for feeding and medication administration. The patient is currently receiving Jevity 1.5 enteral nutrition; however, discrepancies exist between inpatient continuous feeding (70 mL/hour for 20 hours/day) and current home orders for bolus feedings six times daily with 120 mL water flushes every six hours. The primary care provider, Dr. Janson, was contacted to clarify both tube feeding and Foley catheter orders, and a message was left. The patient remains continent of bowel, with a bowel movement observed during the visit. Functionally, the patient is bedbound and requires maximal assistance with all activities of daily living and instrumental activities of daily living. He has been bedbound since

November 2025 and demonstrates significant deconditioning, generalized weakness, impaired balance, decreased safety awareness, and a history of multiple falls within the past year. Prior to his recent decline, the patient was ambulatory with a walker, able to navigate his home environment, access the community, and participate in outpatient therapy. He currently resides with his spouse, who provides continuous care but appears overwhelmed with the complexity of his medical needs; additional support from personal care services is in place. Skilled nursing interventions during the visit included comprehensive medication reconciliation with review of dosages, frequencies, and potential side effects, as well as education on wound care, Foley catheter management, and initiation of teaching related to enteral feeding administration. The spouse was receptive to education but requires ongoing support and reinforcement. Given the patient's significant functional limitations, fall risk, and medical complexity, skilled home health services are indicated, including nursing <mh class="chrome-extension-FindManyStrings chrome-extension-FindManyStrings-style-9 CE-FMS-visits">visits</mh> at a frequency of 1 week for 12 weeks followed by 1 week for 8 weeks, as well as physical and occupational therapy evaluations. The patient is considered homebound due to his bedbound status and the considerable effort and assistance required to leave the home, which poses a safety risk. The plan of care focuses on improving strength, functional mobility, transfer ability, balance, and overall safety with the goal of preventing further decline and optimizing the patient's potential to return to his prior level of function.</div><div>

SN Careplans

SN WK1: 1 (03/12/26-03/14/26)

PARAMETERS FOR PHYSICIAN NOTIFICATION: temperature < 95 > 100.5, heart rate < 50 > 110, respiratory rate < 8 > 22, blood pressure systolic < 90 > 169, blood pressure diastolic < 60 > 90, O2 saturation < 88 > 100, pain < 0 > 5

CAREGIVER: 2. Non-agency caregiver(s) need training/supportive services to provide assistance

HOSPITALIZATION RISKS: 3. Multiple hospitalizations (2 or more) in the past 6 months, 4. Multiple emergency department visits (2 or more) in the past 6 months, 7. Currently taking 5 or more medications, 8. Currently reports exhaustion

STANDING ORDERS: infection control: hygiene, proper hand washing; advance directive: plan if patient is unable to make healthcare decisions ; fall precautions: wear sensible shoes, remove home hazards, living space adequately lit, assistive devices prn; emergency preparedness: plan for prn evacuation, resumption of home health visits; Assess the patient's incision on post op day 7 and the nurse or physical therapist will remove aquacel dressing leaving OTA; if incision is draining educate pt/pcg on cleaning with normal saline and covering with dry gauze daily and as needed. Assess/Instruct Pt/Pcg: Ice to ____ x 20 minutes each hour while awake. If cold machine ordered apply 20 minutes on and 20 minutes off for 3-4 times a day. Assess/Instruct all body systems/vital signs/complications, Blood Pressure; systolic is greater than 169 mm Hg or less than 90 mm Hg; diastolic is greater than 100 mm Hg or less than 55 mm Hg, Clinician to assess comorbidities and report changes in condition to the patient's physician, Pain Rating is greater than 6 on 0-10 scale, Pulse is greater than 110 or less than 50, Respirations are greater than 22 or less than 8, SPO2: is less than 90 % at rest /with exertion, Temperature is greater than 100.5 F or less than 95.0 F, Pain Rating is greater than 6 on 0-10 scale Implement Fall Prevention Program, Instruct and educate the patient/PCG on wearing compression stockings for the next 4 weeks per discharge instructions. Instruct the pt/PCG on using the incentive spirometer 10 times every 2 hour while awake. Provide education content at patient's level of health literacy. Assess/Instruct Pt/Pcg: Safety measures to prevent injury. Assess: Musculoskeletal status. Teach Pt/PCg to maintain appropriate wt bearing status as ordered by MD, total joint replacement precautions as applicable, Safe stair climbing skills, Safe, effective use of adaptive/assist device Assess/Instruct Pt/Pcg: Pain management measures; assess pain level, pain medication, rest, body alignment, ROM, meditation, massage. Pt/PCg educated in pain management techniques including positioning and relaxation techniques Instruct Pt/Pcg: Medication actions, uses, frequency, dose, side effects, interactions of all new/change meds, Provide medication education,. Assess/Instruct Pt/Pcg: Safety measures to prevent injury, Therapeutic Exercise, Transfer Training Monitor surgical wound for s/s of infection, educate on s/s of concern and infection prevention to promote wound healing.

; Skin Preservation: Measures to prevent skin breakdown; pressure relief, incontinence care, nutrition, hydration ; Pain: Pain management measures; pain medication, rest, body alignment, ROM, meditation, massage ; Medications: Medication actions, uses, frequency, dose, interactions of all new/change meds Advance Directive:No Advance Directive

PROBLEMS IDENTIFIED ON ASSESSMENT: M1745 - Behavioral Issues, D0160 - Depression, M1700 - Cognition, M2020 - Oral Med Management, Home Safety, M2102d - Caregiver Performs Treatment, M2102f - Patient Supervision, M2102c - Med Admin, meal preparation, M1033 - Exhaustion, M1400 - Dyspnea, M1620 - Bowel Incontinence, cough/gag/pain chew/swallow, M1610 - Urinary Catheter, urine retention, limited range of motion, limited strength, limited endurance, muscle weakness, weak hand grips, red/tender pressure points, skin breakdown r/t incontinence, #1 - Observable Surgical Wound - Other - Back - Unable to assess wound bed

PROCEDURES: physician-ordered wound care: #1 - Observable Surgical Wound - Other - Back - Unable to assess wound bed: SN/CG TO CLEANSE BACK WOUND WITH NSS, LOOSELY PACK WITH 1/2" IODOFORM PACKING STRIP, APPLY SKIN PREP TO PERIWOUND, COVER WITH BORDERED GAUZE. DAILY., train caregiver(s) to perform medical/rehabilitation treatments, coordinate/arrange caregiver

SN Goals

PATIENT-STATED GOAL: CAREGIVER WANTS TO BE ABLE TO MANAGE PATIENT'S CARE

GOALS

patient/caregiver recalls

- * how to achieve wound healing including cleaning and dressing wound
- * position changes
- * skin care
- * diet modification
- * record wound measurements
- * recalls related medication(s) purpose, schedule

patient/caregiver recalls

- * depression-prevention strategies including avoidance of isolation
- * healthy eating
- * sleeping habits
- * identification of activities that bring pleasure
- * preventive care
- * recalls related medication(s) purpose, schedule

patient/caregiver recalls

- * lifestyle modifications to manage respiratory condition including
- * diet changes and regular exercise
- * strategies to control shortness of breath
- * home remedies to keep lungs healthy
- * recalls related medication(s) purpose, schedule

patient/caregiver recalls

- * how to keep home safe for patient with dementia
- * coping strategies for the caregiver* recalls related medication(s) purpose, schedule

patient/caregiver recalls

- * management of mental health condition including joining a peer group
- * maintaining regular contact with mental health professional
- * avoiding known stressors
- * controlling impulses
- * recalls related medication(s) purpose, schedule

patient/caregiver recalls

- * bowel incontinence management including dietary changes
- * bowel training
- * skin care
- * recalls related medication(s) purpose, schedule

patient/caregiver recalls

- * urinary catheter management including how to flush catheter
- * change and wash drainage bags
- * prevent infection including proper handwashing
- * positioning of catheter
- * recalls related medication(s) purpose, schedule

patient/caregiver recalls

- * strategies to minimize fatigue and exhaustion including work simplification
- * energy conservation
- * lifestyle changes
- * diet
- * recalls related medication(s) purpose, schedule

patient self-administers medications as prescribed

- * recalls related medication(s) purpose, schedule
