18.A. Functional Limitations None of the above					18.B. Activities Permitted non weightbearing LUE					
19. Mental & Psychosocial Status: COGNITION: 0. Alert/ oriented, able to focus and shift attention, comprehends and recalls task directions independently., ANXIETY: 0. Never, SOCIAL ISOLATION: 0. Never, BEHAVIORAL ISSUES: 7. None of the above behaviors demonstrated, HISTORY OF DEPRESSION: No										
20. Prognosis: fair										
22. A Rehabilitation Potential: SELF-CARE: 3. Independent - Patient completed all the activities by him/herself, with or without an assistive device, with no assistance from a helper., MOBILITY: 3. Independent - Patient completed all the activities by him/herself, with or without an assistive device, with no assistance from a helper.					22.B.Discharge Plans family/caregiver will be responsible for managing treatment patient will be responsible for managing treatment					
Homebound status: Due to diagnosis of Multiple fractures of ribs, bilateral, subsequent encounter for fracture with routine healing, the patient is experiencing decreased endurance and mobility, increasing the likelihood of falls. To safely leave their home, the patient needs assistance from another person and an assistive mobility device.										
Clinical Condition The patient is a 45-year-old female who sustained multiple traumatic injuries following a fall from approximately eight feet. Requiring Homecare:Injuries include left-sided rib fractures involving the 3rd through 7th ribs, a small left pneumothorax, a left upper lobe pulmonary contusion, and a left distal radius fracture accompanied by an elbow laceration. Prior to the injury, the patient was independent with all mobility, activities of daily living (ADLs), and instrumental activities of daily living (IADLs), and she was actively driving. Since the injury, the patient presents below her prior level of function and currently requires minimal assistance for bed mobility, transfers, and ambulation. Functional mobility is performed with increased time, effort, and significant pain, with the patient reporting pain levels of up to 10/10 during movement. The patient is currently maintaining non-weight-bearing status of the left upper extremity pending further evaluation by orthopedics. Functional limitations are compounded by decreased strength, endurance, balance, and overall activity tolerance related to pain, deconditioning, and respiratory compromise associated with the pulmonary contusion and pneumothorax. The patient demonstrates a clear need for skilled physical therapy services to address mobility deficits, improve safety with functional mobility, enhance pulmonary function through activity and breathing strategies, and support the restoration of independence with daily functional tasks in order to facilitate a safe discharge and return to her prior level of function. An occupational therapy evaluation was also completed. Assessment revealed that the patient resides in a multi-level home with her husband, who is available to provide supervision and assistance as needed. The patient was evaluated for performance of ADLs and functional transfers. At present, she is able to navigate stairs with supervision. Her husband provides assistance with ADL and IADL tasks as needed due to her current physical limitations and non-weight-bearing restriction of the left upper extremity. For safety during bathing tasks, the patient was advised to obtain and utilize a shower chair as well as a cast cover to protect the affected extremity. The patient is scheduled for a follow-up appointment with her orthopedic physician next Friday for reassessment of the left wrist fracture and potential brace or cast adjustment. Occupational therapy services will follow up after the orthopedic evaluation to reassess her status and determine when it is appropriate to initiate targeted therapy interventions for the left wrist. The ongoing plan of care includes continued skilled physical therapy to improve functional mobility, pain management strategies, safety education, and monitoring of the patient's progress toward regaining independence with daily activities while adhering to orthopedic precautions. Date of Order 04/06/2026 Orders Physician Face-to-Face Date: 04/03/2026 Clinical Condition Requiring Home Care per Certifying Physician: PT, OT due to Multiple fractures of ribs, bilateral, subsequent encounter for fracture with routine healing Homebound Status per Certifying Physician: patient requires another person or medical equipment such as crutches, a walker, or a wheelchair to leave home 1 - SOC - PT Notes: soc OT Eval Notes: Physician Rehmatullah, Abdulwahid
