14. DME and Supplies: wheelchair, rolling walker, hand held shower, bath bench, commode, , walker, cane, 4 wheeled walker				15. Safety Measures: walker precautions, smoke detectors, , , , ambulates with device, ambulates with assistance, emergency phone # clearly displayed, supervision at all times, transfer with assist, wheelchair precautions, , hand rails, cardiac precautions, bathroom safety, , activity supervision	
16. Nutrition: Z. NO PHYSICIAN-ORDERED DIET				17. Allergies: no known allergies	
18.A. Functional Limitations Ambulation, Bowel/Bladder Incontinence, Speech, Contracture, Endurance				18.B. Activities Permitted Exercises Prescribed, Up As Tolerated, Wheelchair, Walker	
19. Mental & Pyschosocial Status: COGNITION: 0. Alert/ oriented, able to focus and shift attention, comprehends and recalls task directions independently., ANXIETY: 0. Never, SOCIAL ISOLATION: 0. Never, BEHAVIORAL ISSUES: 7. None of the above behaviors demonstrated, HISTORY OF DEPRESSION: Yes					
20. Prognosis: good					
22. A Rehabilitation Potential: SELF-CARE: 2. Needed Some Help - Patient needed partial assistance from another person to complete any activities., MOBILITY: 2. Needed Some Help - Patient needed partial assistance from another person to complete any activities.				22.B.Discharge Plans family/caregiver will be responsible for managing treatment patient will be responsible for managing treatment	
Homebound status: Due to diagnosis of Arthritis due to other bacteria vertebrae, the patient is experiencing decreased endurance and mobility, increasing the likelihood of falls. To safely leave their home, the patient needs assistance from another person and an assistive mobility device.					
Clinical Condition <div>The patient is a 61-year-old female with a complex medical history significant for prior cerebrovascular accidents with Requiring Homecare:residual right-sided weakness and hemiplegia, chronic kidney disease stage IV, <mh class="chrome-extension-FindManyStrings chrome-extension-FindManyStrings-style-12 CE-FMS-hypertension">hypertension</mh>, <mh class="chrome-extension-FindManyStrings chrome-extension-FindManyStrings-style-16 CE-FMS-hyperlipidemia">hyperlipidemia</mh>, gastroesophageal reflux disease, neuropathy, depression, and osteoarthritis status post left hip replacement. She was recently hospitalized after presenting via EMS with severe lower back pain and generalized weakness resulting in inability to ambulate. Diagnostic evaluation revealed leukocytosis (WBC 16.7), and MRI of the lumbar spine demonstrated edema and enhancement of the left facet joints at L2-L3 and L3-L4 with associated paraspinal soft tissue changes, concerning for an infectious or inflammatory process, including suspected septic arthritis. Neurosurgery and infectious disease consultations were obtained, and the patient was initiated on intravenous antibiotic therapy. Interventional radiology was unable to obtain a fluid sample due to insufficient collection. A central venous line was placed for long-term antibiotic administration, and the patient was discharged to a skilled nursing facility before transitioning to home health services for continued care. The patient is currently receiving IV daptomycin and ceftriaxone via central line, with a planned six-week course and orders for weekly laboratory monitoring. She resides in a ground-level apartment with her fianc and son, who assist with bathing, meals, and transportation. Prior to hospitalization, the patient ambulated short distances with a rolling walker and relied on furniture for support indoors, while using a power wheelchair or scooter for longer distances. At present, she demonstrates significant functional decline, with marked weakness, impaired balance, and limited endurance. Manual muscle testing reveals strength of approximately 1-2-/5 in the right lower extremity and 3/5 in the left lower extremity. She requires minimal assistance for transfers and short-distance ambulation with a rollator, with mobility limited by pain and instability. She reports poor activity tolerance and completes activities of daily living at a slower pace. While she remains independent with dressing and grooming, she requires assistance for other ADLs and keeps a bedside commode nearby due to limited mobility. The patient also has minimal functional use of the right upper extremity, using it primarily as a stabilizer, and utilizes a resting hand splint, which she is able to independently don and doff. Skilled nursing care focuses on management of intravenous antibiotic therapy, central line maintenance, and monitoring for complications, including signs of infection, adverse medication effects, and renal function given her underlying CKD. Weekly laboratory draws, including CBC and CMP, are performed as ordered. Pain management remains a priority due to ongoing severe lower back pain, which continues to limit functional mobility. Physical therapy evaluation identifies deficits in strength, balance, coordination, and functional mobility, contributing to high fall risk. Skilled PT interventions are indicated to improve strength, gait, transfers, and overall safety, with the goal of returning the patient to her prior level of function. Occupational therapy evaluation further supports the need for skilled services, focusing on ADL retraining, adaptive equipment use, upper extremity function, and safety training. A structured plan includes therapeutic exercise, functional mobility training, and a home exercise program. Patient and caregiver education has been provided regarding medication adherence, central line care, fall prevention, and safe mobility techniques. The patient and family are in agreement with the plan of care. Given her significant mobility limitations, pain, and need for ongoing skilled interventions, the patient is considered homebound, requiring assistance and assistive devices to safely leave the home. Prognosis is guarded due to the severity of her current condition and multiple comorbidities; however, she remains clinically stable with ongoing treatment and multidisciplinary support.</div><div><span style="font-size:

SN WK1: 1 (03/23/26-03/28/26) ,WK2: 1 (03/29/26-04/04/26) ,WK3: 1 (04/05/26-04/11/26)

PARAMETERS FOR PHYSICIAN NOTIFICATION: temperature < 95 > 100.5, heart rate < 50 > 110, respiratory rate < 8 > 22, blood pressure systolic < 90 > 169, blood pressure diastolic < 60 > 90, O2 saturation < 88 > 100, pain < 0 > 5

CAREGIVER: 2. Non-agency caregiver(s) need training/supportive services to provide assistance

HOSPITALIZATION RISKS: 1. History of falls (2 or more falls - or any fall with an injury - in the past 12 months), 3. Multiple hospitalizations (2 or more) in the past 6 months, 4. Multiple emergency department visits (2 or more) in the past 6 months, 7. Currently taking 5 or more medications, 8. Currently reports exhaustion

STANDING ORDERS: infection control: hygiene, proper hand washing; advance directive: plan if patient is unable to make healthcare decisions ; fall precautions: wear sensible shoes, remove home hazards, living space adequately lit, assistive devices prn; emergency preparedness: plan for prn evacuation, resumption of home health visits; Assess the patient's incision on post op day 7 and the nurse or physical therapist will remove aquacel dressing leaving OTA; if incision is draining educate pt/pcg on cleaning with normal saline and covering with dry gauze daily and as needed. Assess/Instruct Pt/Pcg: Ice to ____ x 20 minutes each hour while awake. If cold machine ordered apply 20 minutes on and 20 minutes off for 3-4 times a day. Assess/Instruct all body systems/vital signs/complications, Blood Pressure: systolic is greater than 169 mm Hg or less than 90 mm Hg; diastolic is greater than 100 mm Hg or less than 55 mm Hg, Clinician to assess comorbidities and report changes in condition to the patient's physician, Pain Rating is greater than 6 on 0-10 scale, Pulse is greater than 110 or less than 50, Respirations are greater than 22 or less than 8, ~~SpO2~~ is less than 90 % at rest /with exertion, Temperature is greater than 100.5 F or less than 95.0 F, Pain Rating is greater than 6 on 0-10 scale Implement Fall Prevention Program, Instruct and educate the patient/PCG on wearing compression stockings for the next 4 weeks per discharge instructions. Instruct the pt/PCG on using the incentive spirometer 10 times every 2 hour while awake. Provide education content at patient's level of health literacy. Assess/Instruct Pt/Pcg: Safety measures to prevent injury. Assess: Musculoskeletal status. Teach Pt/PCg to maintain appropriate wt bearing status as ordered by MD, total joint replacement precautions as applicable, Safe stair climbing skills, Safe, effective use of adaptive/assist device Assess/Instruct Pt/Pcg: Pain management measures; assess pain level, pain medication, rest, body alignment, ROM, meditation, massage. Pt/PCg educated in pain management techniques including positioning and relaxation techniques Instruct Pt/Pcg: Medication actions, uses, frequency, dose, side effects, interactions of all new/change meds, Provide medication education,. Assess/Instruct Pt/Pcg: Safety measures to prevent injury, Therapeutic Exercise, Transfer Training Monitor surgical wound for s/s of infection, educate on s/s of concern and infection prevention to promote wound healing.

; Skin Preservation: Measures to prevent skin breakdown; pressure relief, incontinence care, nutrition, hydration ; Pain: Pain management measures; pain medication, rest, body alignment, ROM, meditation, massage ; Medications: Medication actions, uses, frequency, dose, interactions of all new/change meds Advance Directive:POLST (Physician Orders for Life-Sustaining Treatment)

PROBLEMS IDENTIFIED ON ASSESSMENT: D0160 - Depression, M2102d - Caregiver Performs Treatment, M2102f - Patient Supervision, M2020 - Oral Med Management, M2102c - Med Admin, M1400 - Dyspnea, dependent edema, M1033 - Exhaustion, muscle weakness, limited range of motion, limited endurance, muscle spasms, limited strength, balance deficit, daytime fatigue, difficulty sleeping, impaired speech, weak hand grips, Pain Interference with ADLs, Pain Effect on Sleep

PROCEDURES: incentive spirometer, train caregiver(s) to perform medical/rehabilitation treatments, monitor intake & output, teach/coordinate/arrange medication packaging and/or administration

TEACH PATIENT/CAREGIVER: * lifestyle modifications to manage respiratory condition including diet changes and regular exercise strategies to control shortness of breath home remedies to keep lungs healthy, related medication(s) purpose, schedule, * how to maintain a diary to monitor effective and non-effective pain relief including documenting time of pain, rating, precipitating events, medications, treatments, and what works best to relieve pain teach relaxation skills and diversional activities, related medication(s) purpose, schedule, * depression-prevention strategies including avoidance of isolation healthy eating sleeping habits identification of activities that bring pleasure preventive care, related medication(s) purpose, schedule, * strategies to minimize fatigue and exhaustion including work simplification energy conservation lifestyle changes diet, related medication(s) purpose, schedule, patient self-administers medications as prescribed, related medication(s) purpose, schedule, caregiver administers and/or packages medications appropriately

SN Goals

PATIENT-STATED GOAL: Patient wants to be able to regain her strength back so she can start planning her wedding.

GOALS

patient/caregiver recalls

- * lifestyle modifications to manage respiratory condition including diet changes and regular exercise
- * strategies to control shortness of breath
- * home remedies to keep lungs healthy
- * recalls related medication(s) purpose, schedule

patient/caregiver recalls

- * how to maintain a diary to monitor effective and non-effective pain relief including documenting time of pain, rating, precipitating events, medications, treatments, and what works best to relieve pain
- * teach relaxation skills and diversional activities
- * recalls related medication(s) purpose, schedule

patient/caregiver recalls

- * depression-prevention strategies including avoidance of isolation
- * healthy eating
- * sleeping habits
- * identification of activities that bring pleasure
- * preventive care
- * recalls related medication(s) purpose, schedule

patient/caregiver recalls

- * strategies to minimize fatigue and exhaustion including work simplification
- * energy conservation
- * lifestyle changes
- * diet
- * recalls related medication(s) purpose, schedule

patient self-administers medications as prescribed

- * recalls related medication(s) purpose, schedule

caregiver administers and/or packages medications appropriately
