Homebound status: Due to diagnosis of Hypertensive heart and chronic kidney disease without heart failure, with stage 1 through stage 4 chronic kidney disease, or unspecified chronic kidney disease, the patient is experiencing decreased endurance and mobility, increasing the likelihood of falls. To safely leave their home, the patient needs assistance from another person and an assistive mobility device

Clinical Condition Requiring Homecare: The patient continues to require skilled physical therapy due to lower extremity weakness, impaired transfers, decreased endurance, and increased fall risk. Interventions provided include therapeutic exercise, transfer training, gait training with a rollator and intermittent oxygen use, and education on activities of daily living safety. Caregiver training has been completed on safe mobility techniques, use of adaptive equipment, and pain management strategies. Skilled services remain medically necessary to improve functional mobility, enhance safety, prevent further deconditioning, and support progression toward independent and safe function within the home environment. <o:p></o:p> <o:p> </o:p> Date of Order<o:p></o:p> 03/30/2026
