22. A Rehabilitation Potential:			22.B.Discharge Plans		
SELF-CARE: 3. Independent - Patient completed all the activities by him/herself, with or without an assistive device, with no assistance from a helper., MOBILITY: 3. Independent - Patient completed all the activities by him/herself, with or without an assistive device, with no assistance from a helper.			patient will be responsible for managing treatment		
Homebound status: After undergoing C2-c5 laminectomy, right c3-c4 foraminotomy, and c2-c6 posterior spinal fusion performed for intradural tumor resection, the patient is experiencing decreased endurance and mobility, increasing the likelihood of falls. To safely leave their home, the patient needs assistance from another person and an assistive mobility device.					
Clinical Condition <div>Patient is a 51-year-old male recently discharged from rehabilitation status post C2-C5 laminectomy, right C3-C4 foraminotomy, and C2-C6 posterior spinal fusion for intradural tumor resection. Past medical history is significant for congestive heart failure, hypertension, severe obesity with BMI 45-49.9, type 2 diabetes mellitus with neuropathy, osteoarthritis of the right knee status post total knee replacement in June 2024, intermittent asthma, history of pulmonary embolus, chronic back muscle spasms, constipation, gastroesophageal reflux disease, and opioid use disorder with opioid intoxication. Skilled nursing frequency ordered for 1 visit weekly for 12 weeks with 2 PRN <mh class="chrome-extension-FindManyStrings chrome-extension-FindManyStrings-style-6 CE-FMS-visits">visits</mh>, and PT/OT evaluations were ordered. During skilled nursing assessment, patient was noted with severely elevated blood pressure of 210/120 mmHg and heart rate in the low 100s. Patient reported shortness of breath when lying flat, intermittent difficulty breathing, and inability to sleep well the previous night due to dyspnea. Lung sounds were diminished throughout. Patient admitted to not taking prescribed medications that day except for Gabapentin. Due to history of pulmonary embolism, uncontrolled hypertension, edema, and respiratory complaints, emergency medical services were activated and patient was transported to the emergency room for further evaluation. Follow-up communication revealed patient was not admitted; patient reported receiving antihypertensive medication, IV treatment for lower extremity edema, and respiratory treatments prior to discharge home. Skilled nursing reviewed discharge paperwork and medications during follow-up visit and suspected medication noncompliance. Extensive education was provided regarding the importance of medication adherence, disease management, and monitoring for worsening cardiopulmonary symptoms. Patient continues to wear cervical neck collar as ordered and was instructed to maintain use until follow-up with surgeon per discharge instructions. Patient lives alone in an apartment, with son serving as primary caregiver and assisting as needed. Patient remains homebound due to impaired mobility, weakness, decreased endurance, dyspnea with exertion, balance deficits, fall risk, and postoperative restrictions. Patient reported a history of progressive balance impairment and falls from 2024 through 2025, eventually leading to MRI evaluation that revealed a cervical mass requiring surgical removal in March 2026. Patient ambulates independently indoors with a cane for short distances and uses a rolling walker for longer distances and community mobility. Patient demonstrates bilateral lower extremity weakness, impaired standing balance, altered gait mechanics, decreased endurance, and instability during ambulation. Ambulation is limited to household distances, and patient requires standby assistance for bed mobility and transfers with minimal assistance/contact guard assist during gait activities. Patient also reports bilateral hand numbness, upper extremity weakness, dropping objects, impaired fine motor coordination, clumsiness, tingling sensation in lower extremities, and reduced sensation

to the plantar aspect of the right foot. Patient performs basic ADLs with supervision, frequent rest breaks, and increased time due to fatigue, weakness, and shortness of breath. Patient additionally reports left knee joint pain and difficulty sleeping supine secondary to asthma and dyspnea, preferring side-lying positioning for comfort. Physical assessment revealed patient awake, alert, oriented, and responsive. Surgical incision site appeared closed with scar tissue formation and no reported complications at time of visit. Patient continues to wear cervical brace at all times except during eating, drinking, showering, sleeping, or lying down per postoperative precautions. Skilled nursing reinforced fall prevention strategies, medication compliance, energy conservation techniques, and importance of adhering to postoperative precautions. Patient was instructed in deep breathing exercises as part of home exercise program to assist with respiratory status and endurance. Skilled PT services are medically necessary to address strengthening, balance retraining, gait training, endurance deficits, transfer safety, and fall prevention. Skilled OT services are required to improve hand strength, dexterity, coordination, fine motor function, safety with ADLs, and overall quality of life. Continued skilled nursing services are required for cardiopulmonary monitoring, medication management, postoperative assessment, disease process education, safety monitoring, and prevention of further hospitalization.

SN WK1: 1 (04/30/26-05/02/26) ,WK2: 2 (05/03/26-05/09/26) ,WK3: 2 (05/10/26-05/16/26) ,WK4: 1 (05/17/26-05/23/26)

PARAMETERS FOR PHYSICIAN NOTIFICATION: temperature < 95 > 100.5, heart rate < 50 > 110, respiratory rate < 8 > 22, blood pressure systolic < 90 > 169, blood pressure diastolic < 60 > 90, O2 saturation < 88 > 100, pain < 0 > 5

CAREGIVER: 3. Non-agency caregiver(s) are not likely to provide assistance OR it is unclear if they will provide assistance

HOSPITALIZATION RISKS: 7. Currently taking 5 or more medications, 8. Currently reports exhaustion, 9. Other risk(s) not listed in 1- 8

STANDING ORDERS: infection control: hygiene, proper hand washing; advance directive: plan if patient is unable to make healthcare decisions ; fall precautions: wear sensible shoes, remove home hazards, living space adequately lit, assistive devices prn; emergency preparedness: plan for prn evacuation, resumption of home health visits; Assess the patient's incision on post op day 7 and the nurse or physical therapist will remove aquacel dressing leaving OTA; if incision is draining educate pt/pcg on cleaning with normal saline and covering with dry gauze daily and as needed. Assess/Instruct Pt/Pcg: Ice to ____ x 20 minutes each hour while awake. If cold machine ordered apply 20 minutes on and 20 minutes off for 3-4 times a day. Assess/Instruct all body systems/vital signs/complications, Blood Pressure; systolic is greater than 169 mm Hg or less than 90 mm Hg; diastolic is greater than 100 mm Hg or less than 55 mm Hg, Clinician to assess comorbidities and report changes in condition to the patient's physician, Pain Rating is greater than 6 on 0-10 scale, Pulse is greater than 110 or less than 50, Respirations are greater than 22 or less than 8, SPO2: is less than 90 % at rest /with exertion, Temperature is greater than 100.5 F or less than 95.0 F, Pain Rating is greater than 6 on 0-10 scale Implement Fall Prevention Program, Instruct and educate the patient/PCG on wearing compression stockings for the next 4 weeks per discharge instructions. Instruct the pt/PCG on using the incentive spirometer 10 times every 2 hour while awake. Provide education content at patient's level of health literacy. Assess/Instruct Pt/Pcg: Safety measures to prevent injury. Assess: Musculoskeletal status. Teach Pt/Pcg to maintain appropriate wt bearing status as ordered by MD, total joint replacement precautions as applicable, Safe stair climbing skills, Safe, effective use of adaptive/assist device Assess/Instruct Pt/Pcg: Pain management measures; assess pain level, pain medication, rest, body alignment, ROM, meditation, massage. Pt/Pcg educated in pain management techniques including positioning and relaxation techniques Instruct Pt/Pcg: Medication actions, uses, frequency, dose, side effects, interactions of all new/change meds, Provide medication education,. Assess/Instruct Pt/Pcg: Safety measures to prevent injury, Therapeutic Exercise, Transfer Training Monitor surgical wound for s/s of infection, educate on s/s of concern and infection prevention to promote wound healing.

; Skin Preservation: Measures to prevent skin breakdown; pressure relief, incontinence care, nutrition, hydration ; Pain: Pain management measures; pain medication, rest, body alignment, ROM, meditation, massage ; Medications: Medication actions, uses, frequency, dose, interactions of all new/change meds Advance Directive:No Advance Directive

PROBLEMS IDENTIFIED ON ASSESSMENT: D0160 - Depression, M2020 - Oral Med Management, Home Safety, meal preparation, M2102c - Med Admin, dependent edema, lung sounds not clear, abnormal blood pressure, M1033 - Exhaustion, M1400 - Dyspnea, limited strength, limited endurance, balance deficit, Pain Interference with ADLs, obesity

PROCEDURES: cough/deep breathing exercises, coordinate/arrange for maintenance of clean/uncluttered living area

TEACH PATIENT/CAREGIVER: * lifestyle modifications to manage respiratory condition including diet changes and regular exercise strategies to control shortness of breath home remedies to keep lungs healthy, related medication(s) purpose, schedule, * how to maintain a diary to monitor effective and non-effective pain relief including documenting time of pain, rating, precipitating events,

SN Goals

PATIENT-STATED GOAL: I WANT TO GET STRONGER BEFORE I GO OUT. MY LEGS FEEL WEAK

GOALS

patient/caregiver recalls

- * lifestyle modifications to manage respiratory condition including
- * diet changes and regular exercise
- * strategies to control shortness of breath
- * home remedies to keep lungs healthy
- * recalls related medication(s) purpose, schedule

patient/caregiver recalls

- * depression-prevention strategies including avoidance of isolation
- * healthy eating
- * sleeping habits
- * identification of activities that bring pleasure
- * preventive care
- * recalls related medication(s) purpose, schedule

patient's living environment is clean/uncluttered

meal preparation is available to patient for all meals

caregiver administers and/or packages medications appropriately

patient/caregiver recalls

- * how to maintain a diary to monitor effective and non-effective pain relief including documenting time of pain, rating, precipitating events, medications, treatments, and what works best to relieve pain
- * teach relaxation skills and diversional activities
- * recalls related medication(s) purpose, schedule

patient/caregiver recalls

- * strategies to minimize fatigue and exhaustion including work simplification
- * energy conservation
- * lifestyle changes
- * diet
- * recalls related medication(s) purpose, schedule

patient self-administers medications as prescribed

- * recalls related medication(s) purpose, schedule
