14. DME and Supplies: hand held shower, grab bars, bath bench				15. Safety Measures: supervision at all times, medication safety, fall precautions, diabetic precautions, bathroom safety, ambulates with assistance,		
16. Nutrition: cardiac diet				17. Allergies: no known allergies		
18.A. Functional Limitations Ambulation, Endurance, Bowel/Bladder Incontinence				18.B. Activities Permitted Up As Tolerated		
19. Mental & Pyschosocial Status: COGNITION: 1. Requires prompting (cuing, repetition, reminders) only under stressful or unfamiliar conditions., ANXIETY: 1. In new or complex situations only, SOCIAL ISOLATION: 0. Never, BEHAVIORAL ISSUES: 7. None of the above behaviors demonstrated, HISTORY OF DEPRESSION: No						
20. Prognosis: good						
22. A Rehabilitation Potential: SELF-CARE: 3. Independent - Patient completed all the activities by him/herself, with or without an assistive device, with no assistance from a helper., MOBILITY: 3. Independent - Patient completed all the activities by him/herself, with or without an assistive device, with no assistance from a helper.				22.B.Discharge Plans family/caregiver will be responsible for managing treatment family/caregiver will be responsible for managing treatment patient will be responsible for managing treatment		
Homebound status: Due to diagnosis of Paroxysmal Atrial Fibrillation, the patient is experiencing decreased endurance and mobility, increasing the likelihood of falls. To safely leave their home, the patient needs assistance from another person and an assistive mobility device.						
Clinical Condition Requiring Homecare: <div>The patient is an 89-year-old female who presented with confusion and was recently hospitalized for an acute cardioembolic stroke and left renal infarct. She currently resides in a senior living community with assistance from her daughter, who is requesting additional support through five-day-a-week aide services to assist with her care. On <mh class="chrome-extension-FindManyStrings chrome-extension-FindManyStrings-style-8 CE-FMS-assessment">assessment</mh>, the patient is alert, awake, and oriented to person, place, and time, though she demonstrates mild cognitive impairment characterized by forgetfulness and the need for occasional redirection. She is hard of hearing and uses prescription glasses for visual support. Neurologically, the patient presents with left-sided weakness, mild facial droop, and impaired balance, contributing to decreased endurance and placing her at high risk for falls and functional decline. Physical examination reveals symmetrical facial movements, equal bilateral hand grasps, and pupils that are equal and reactive to light. Lung sounds are clear to auscultation posteriorly. She has trace lower extremity edema, for which elevation has been encouraged. The abdomen is soft and non-tender with active bowel sounds in all four quadrants. The patient is incontinent of bladder but denies dysuria or discomfort. She is currently ambulating independently and denies pain at the time of the visit. Her medical history is significant for atrial fibrillation (currently temporarily off anticoagulation), type 2 diabetes mellitus, hypertension, hyperlipidemia, and mild cognitive impairment, all of which complicate her recovery and increase her risk for further medical events. Functionally, she demonstrates deficits in mobility, transfers, and gait, necessitating skilled physical therapy services to improve strength, balance, safety, and overall independence. Interventions include recommendations for adaptive equipment such as a shower bench to enhance safety during bathing and therapy putty to improve bilateral hand strength. The patient has a life alert system in place but requires frequent reminders to wear the device consistently. Additional recommendations include utilization of meal delivery services such as Meals on Wheels, as her daughter prefers that she avoid stove use for safety reasons. Education has been provided regarding fall prevention strategies, safety awareness, and the importance of supervision. The plan of care focuses on close monitoring for neurological and cardiopulmonary changes, progressive functional mobility training, caregiver education, and coordination with community resources to support a gradual return toward prior level of function. Prognosis is considered fair given the patient's advanced age and medical complexity.</div><div> </div><div>Date of Order</div><div>03/17/2026</div><div>Orders</div><div>Physician Face-to-Face Date: 03/11/2026</div><div>Clinical Condition Requiring Home Care per Certifying Physician: SN disease management, PT eval and treat, OT eval and treat, HHA daily adl's due to Paroxysmal Atrial Fibrillation</div><div>Homebound Status per Certifying Physician: patient requires another person or medical equipment such as crutches, a walker, or a wheelchair to leave home</div><div> </div><div><div>1 - SOC - SN Notes: soc</div><div>OT Eval Notes:</div><div>PT Eval
