20. Prognosis:			good		
22. A Rehabilitation Potential:			22.B.Discharge Plans		
SELF-CARE: , MOBILITY:			patient will be responsible for managing treatment		
Homebound status:			Due to diagnosis of Type 2 diabetes mellitus with foot ulcer, the patient is experiencing decreased endurance and mobility, increasing the likelihood of falls. To safely leave their home, the patient needs assistance from another person and an assistive mobility device		
Clinical Condition Requiring Homecare:			<p class="MsoNoSpacing">Recertification visit for a wound on the right posterior ankle indicates the need for ongoing wound care to prevent deterioration and infection, making it a taxing effort for the patient to leave the home. The patient is alert and oriented 3 and lives with family. Assessment of the wound shows a pink, flesh-colored wound bed with moderate bloody drainage; a photo was obtained, and measurements are 1.5 2.5 0.1 cm. The patient reports being active with household tasks such as cleaning and organizing, with minimal pain rated at 4/10, good sleep, and a good appetite. She denies any recent falls, reports her last bowel movement was yesterday, and has no urinary discomfort. Medications were reviewed with the patient, who demonstrated understanding of their actions and potential side effects, and no abnormal bleeding was reported. For safety, the patient resides on the first level of the home and uses a walker and cane for ambulation. She is able to perform her wound care independently and appropriately in the absence of the nurse.Top of Form<o:p></o:p></p><p class="MsoNoSpacing">&nbsp;</p><p class="MsoNoSpacing">Bottom of Form<o:p></o:p></p><p class="MsoNoSpacing">&nbsp;</p>Date of Order<o:p></o:p></p><p class="MsoNoSpacing">&nbsp;</p><p class="MsoNoSpacing">Physician Face-to-Face Date: 01/22/2026
