bath bench, walker			losartan ace inhibitors		
16. Nutrition:			18.B. Activities Permitted		
G-Tube			Walker, Up As Tolerated		
18.A. Functional Limitations			19. Mental & Pyschosocial Status:		
Ambulation, Endurance			COGNITION: 2. Requires assistance and some direction in specific situations (for example, on all tasks involving shifting of attention) or consistently requires low stimulus environment due to distractibility, ANXIETY: 1. In new or complex situations only, SOCIAL ISOLATION: 0. Never, BEHAVIORAL ISSUES: 1. Memory deficit: failure to recognize familiar persons/places, inability to recall events of past 24 hours, significant memory loss so that supervision is required!2. Impaired decision-making: failure to perform usual ADLs or IADLs, inability to appropriately stop activities, jeopardizes safety through actions, HISTORY OF DEPRESSION: No		
20. Prognosis:			22. A Rehabilitation Potential:		
good			SELF-CARE: 2. Needed Some Help - Patient needed partial assistance from another person to complete any activities., MOBILITY: 2. Needed Some Help - Patient needed partial assistance from another person to complete any activities.		
22. B. Discharge Plans			Homebound status:		
SN: patient will be responsible for managing treatment PT and OT: family/careg			Due to diagnosis of Hemiplegia following cerebral infarction affecting left dominant side, the patient is experiencing decreased endurance and mobility, increasing the likelihood of falls. To safely leave their home, the patient needs assistance from another person and an assistive mobility device		
Clinical Condition Requiring Homecare:					
<p class="MsoNoSpacing">The patient is an 83-year-old male with a significant past medical history including dementia, congestive heart failure (CHF), chronic kidney disease (CKD), diabetes mellitus, cerebral infarction/CVA, dysphagia, abdominal aortic aneurysm without rupture, metabolic encephalopathy, dysarthria, atrioventricular block, anemia, anxiety, hypothyroidism, and left hip replacement, with a recent hospitalization for aspiration pneumonia. Consents were signed by the patient, who is alert and requires ambulatory assistance with a walker, one-person assistance, and continuous supervision for safety and fall prevention, making leaving the home a taxing effort. The patient resides in a row house with first-floor accommodations including a hospital bed and bedside commode and receives 24-hour supervision from caregiver Terry and family members. The patient ambulates short distances with a rolling walker and demonstrates decreased right step length, left knee recurvatum, and impaired balance, evidenced by a Tinetti score of 11/28. Bed mobility and transfers require supervision and cueing. The patient has a PEG tube with reported flushing resistance, and immediate surgical follow-up was recommended to prevent complications. No wounds, abnormal bleeding, or abnormal lung sounds were noted, and the patient denied pain. Bilateral lower extremity edema was present, and caregiver education was provided regarding leg elevation. Medications were reviewed for understanding; however, the caregiver reported administering a higher dose of medication than prescribed, with follow-up scheduled with the PCP. Occupational therapy evaluation noted the patient requires assistance with all ADLs, primarily remains in his room, uses a bedside commode, and receives sponge baths. Skilled therapy services were recommended to address strength, functional mobility, ADL performance, safety awareness, caregiver education, and fall prevention.</o:p></o:p></p> <p class="MsoNoSpacing"><o:p>&nbsp; </o:p></p> <p class="MsoNoSpacing">Date of Order<o:p></o:p></p> <p class="MsoNoSpacing">05/15/2026
