18.A. Functional Limitations Ambulation					18.B. Activities Permitted None of the above					
19. Mental & Pyschosocial Status: COGNITION: 0. Alert/ oriented, able to focus and shift attention, comprehends and recalls task directions independently., ANXIETY: 0. Never, SOCIAL ISOLATION: 0. Never, BEHAVIORAL ISSUES: 7. None of the above behaviors demonstrated, HISTORY OF DEPRESSION: Depression no										
20. Prognosis: fair										
22. A Rehabilitation Potential: SELF-CARE: 3. Independent - Patient completed all the activities by him/herself, with or without an assistive device, with no assistance from a helper., MOBILITY: 3. Independent - Patient completed all the activities by him/herself, with or without an assistive device, with no assistance from a helper.					22.B.Discharge Plans patient will be responsible for managing treatment					
Homebound status: Due to diagnosis of Hypertensive heart and chronic kidney disease with heart failure and stage 1 through stage 4 chronic kidney disease, or unspecified chronic kidney disease, the patient is experiencing decreased endurance and mobility, increasing the likelihood of falls. To safely leave their home, the patient needs assistance from another person and an assistive mobility device										
Clinical Condition Requiring Homecare: <p class="MsoNoSpacing">The patient is a 74-year-old male with a past medical history significant for hypertension, type 2 diabetes mellitus, prior left parieto-occipital cerebrovascular accident, chronic kidney disease, myocardial infarction, congestive heart failure, and seizure disorder. He was referred to home health services following hospitalization and subacute rehabilitation after a witnessed seizure episode. According to his son, the patient was found kneeling in the kitchen and was assisted to a chair; shortly thereafter, he became unresponsive, prompting a 911 call, and was subsequently confirmed to have experienced a seizure. Upon assessment, the patient was alert and oriented x4, in no acute distress, with clear lungs, even and unlabored respirations, intact skin, and vital signs within normal limits. The patient is currently staying with his son and family in a two-story home, and his son assists with weekly medication management using a pill organizer. Skilled nursing provided education regarding medication compliance, medication indications and side effects, seizure precautions, fall prevention, and hand hygiene. Physical therapy evaluation revealed the patient to be independent with transfers, bed mobility, ambulation without an assistive device on even and uneven surfaces, and self-care activities, with good balance and safety awareness; therefore, he was determined not to be a candidate for ongoing home health physical therapy. Occupational therapy evaluation also found the patient functioning independently with basic self-care, functional transfers, and household mobility, with no additional OT services warranted at this time.</o:p></o:p></p> <p class="MsoNoSpacing"><o:p> </o:p></p> <p class="MsoNoSpacing">Date of Order</o:p></p> <p class="MsoNoSpacing">05/27/2026 Order</o:p></p> <p class="MsoNoSpacing">Physician Face-to-Face Date: 05/14/2026 Clinical Condition Requiring Home Care per Certifying Physician: sn-disease management pt-eval & treat ot-eval & treat dx: Hypertensive heart and chronic kidney disease with heart failure and stage 1 through stage 4 chronic kidney disease, or unspecified chronic kidney disease Homebound Status per Certifying Physician: patient requires another person or medical equipment such as crutches, a walker, or a wheelchair to leave home</o:p></o:p></p> <p class="MsoNoSpacing"> 1 - SOC - SN Notes:</o:p></p> <p class="MsoNoSpacing">PT Eval Notes:</o:p></p> <p class="MsoNoSpacing">OT Eval Notes:</o:p></p> <p class="MsoNoSpacing">Physician:Tammara, Anita</p>
