(Calcium Carbonate-Cholecalciferol) Calcium 600/Vitamin D Oral Tablet 600 -10 MG-MCG / 1 Tablet by mouth once a day for Vitamin D- deficiency
Simvastatin - Simvastatin 20 mg 1 Tablet by mouth at bedtime for Hyperlipidemia
Jardiance - Empagliflozin 100 mg 1 tab by mouth once a day Dm
Multivitamin - Alpha-Tocopherol Acetate: Ascorbic Acid: Biotin: Cholecalciferol: Cyanocobalamin: Dexpanthenol: Folic Acid: Niacinamide: Pyridox 1 tablet by mouth once a day for supplement
Cozaar - Losartan Potassium 100 mg 1 tab by mouth once a day HTN

14. DME and Supplies:

wheelchair, wound care supplies, grab bars, bath bench

15. Safety Measures:

wheelchair precautions, , fall precautions, bathroom safety, , ambulates with assistance, activity supervision

16. Nutrition:

cardiac diet

17. Allergies:

no known allergies

18.A. Functional Limitations

Ambulation, , Endurance, , Bowel/Bladder Incontinence,

18.B. Activities Permitted

Up As Tolerated

19. Mental & Pyschosocial Status: COGNITION: 3. Unable to get to and from the toilet or bedside commode but is able to use a bedpan/urinal independently, ANXIETY: 0. Never, SOCIAL ISOLATION: , BEHAVIORAL ISSUES: , HISTORY OF DEPRESSION:

20. Prognosis: good

22. A Rehabilitation Potential:

SELF-CARE: , MOBILITY:

22.B.Discharge Plans

family/caregiver will be responsible for managing treatment

Homebound status: Due to diagnosis of Venous insufficiency (chronic) (peripheral), the patient is experiencing decreased endurance and mobility, increasing the likelihood of falls. To safely leave their home, the patient needs assistance from another person and an assistive mobility device.

Clinical Condition Requiring Homecare:

The patient is a 71-year-old African American male with a history of hospitalization following a fall with fracture, followed by an extended rehabilitation stay (approximately one year). He currently resides alone in a secured-access apartment with assistance from his daughter. Upon arrival, the nurse met the daughter downstairs; the daughter requested that the nurse clean the patient following a bowel movement earlier today. The nurse offered education and hands-on training regarding incontinence care; however, the daughter declined, stating she was unable to perform this care. The patient was found in bed with a strong foul odor and reported he had been lying in feces and urine for approximately two days because he was unable to get to the toilet. The daughter reported a wound on the patient's buttock. The nurse provided thorough incontinence care and performed a skin assessment of the buttocks/sacral area; no skin breakdown was observed at the time of this visit. The nurse assisted with application of a clean brief/diaper and reinforced hygiene needs to reduce risk of skin breakdown and infection. On assessment, the patient was alert, awake, and oriented (reported as oriented to person, place, and time; also documented as alert and oriented x4), with no reported vision or hearing impairment. Neurological screening was within expected limits for this visit, with facial symmetry present, equal bilateral grips, and pupils equal and reactive to light. Respiratory assessment revealed posterior lung fields clear to auscultation without use of accessory muscles. The abdomen was distended but soft and non-tender, with active bowel sounds in all four quadrants. The patient is incontinent of both bowel and bladder. Bilateral lower extremities demonstrated edema with discoloration and multiple small open blisters; the patient also reported left calf pain with partial relief from medication (pain medication not specified). Vital signs were notable for elevated blood pressure of 189/100 mmHg; the patient was without acute distress and denied dizziness, lightheadedness, or headache. The patient reported he had not taken his blood pressure medication since Monday; the daughter contacted the pharmacy during the visit and stated she would pick up the medication today. The nurse notified the provider by calling and leaving a message with the service for a return call. The patient has a Life Alert system in place. He is currently receiving caregiver assistance through Right at Home through Sunday. The patient utilizes bilateral knee flexion orthoses. Plan of care includes resumption of prescribed antihypertensive therapy as soon as obtained, monitoring of blood pressure and symptoms, continued incontinence care and frequent hygiene/brief changes to prevent skin breakdown, ongoing assessment and protection of lower-extremity skin integrity (open blisters/edema), and follow-up with the provider regarding uncontrolled blood pressure and reported left calf pain. Education was offered to the daughter regarding safe, routine incontinence care and skin protection measures; the daughter declined training at this time. The patient and daughter were advised to seek urgent medical evaluation for worsening calf pain, increased swelling/redness/warmth, shortness of breath, chest pain, new neurologic symptoms, or symptoms associated with severe hypertension.
 Date of Order 05/12/2026 Orders Physician Face-to-Face Date: 01/05/2026 Clinical Condition Requiring Home Care per Certifying Physician: sn-disease management pt-eval & treat ot-eval & treat due to Venous insufficiency (chronic) (peripheral) Homebound Status per Certifying Physician: patient requires another person or medical equipment such as crutches, a walker, or a wheelchair to leave home
 4 - Recertification Notes: Patient is a 71 years old African American male that is scheduled for 60 days recertification for wound care. Patient is living in an apartment alone with day time private aide and daughter is available as needed. Remains in continent of bladder and bowel occasionally, used a urinal at night. Patient is wheelchair bound, locomotion independently, doesn't used the foot rest but keeps legs straight outward/elevated once in the wheelchair
