Homebound status:
After undergoing Left Total Hip Replacement surgery, the patient is experiencing decreased endurance and mobility, increasing the likelihood of falls. To safely leave their home, the patient needs assistance from another person and an assistive mobility device.

Clinical Condition Requiring Homecare:

<span style="mso-spacerun:'yes';font-family:Calibri;mso-bidi-font-family:'Times New Roman';
font-size:11.0000pt;mso-font-kerning:1.0000pt;">Skilled nursing admission and physical therapy evaluation were completed for a 66-year-old female who is alert and oriented 4 and status post left total hip replacement (LTHR) performed on 6/8/26. The patient and her spouse are deaf; communication during visits was facilitated through a translator line and written communication. Her past medical history includes anxiety, nontoxic multinodular thyroid goiter, non-ST elevation myocardial infarction (NSTEMI), asthma, and hyperlipidemia. The surgical dressing to the left hip was assessed and found to be clean, dry, intact, and securely in place, with no signs or symptoms of infection noted. The patient resides with her spouse, who serves as the primary caregiver and assists with activities of daily living, medication management, and adherence to the plan of care. Following surgery, the patient demonstrates decreased endurance, reduced left hip strength, impaired balance, unsteady gait, difficulty with transfers and stair negotiation, decreased functional mobility, and an increased risk for falls. She requires assistance from another person and the use of an assistive device to safely ambulate and leave the home, making her homebound. Skilled nursing education was provided regarding medication management, pain control, mobility restrictions, hip precautions, edema management, fall prevention, infection prevention, safe transfers, bed mobility, and the importance of daily ambulation and adherence to the home exercise program. Pain is currently well controlled with prescribed medications. The patient and caregiver verbalized understanding of all teaching provided and agreed with the physical therapy plan of care. Continued skilled nursing and home physical therapy services are medically necessary to monitor surgical recovery, prevent complications, improve strength, balance, mobility, and safety, and restore the patient's highest level of functional independence. <span style="mso-spacerun:'yes';font-family:Calibri;mso-bidi-font-family:'Times New Roman';
