Medications: Dose/Frequency/Route (N)ew (C)hanged SERTRALINE Take 100 MG Tablet by mouth daily Multivitamin Womens 50+ Adv 0 Take 1 tablet by mouth in the morning Metoprolol Tartrate - Metoprolol Tartrate Take 50 MG Tablet by mouth 2 times daily LOSARTAN POTASSIUM Take 100 MG Tablet by mouth daily GABAPENTIN 300 MG / 1 Capsule by mouth once a day and 2 capsules at night FUROSEMIDE Take 20 MG Tablet by mouth every 48 hours ACETAMINOPHEN Take 500 mg tablet by mouth 2 times daily as needed for Pain ATORVASTATIN 40 MG / 1 Tablet by mouth daily CALCIUM-VITAMIN D PO 1 tablet by mouth 2 times daily DABIGATRAN ETEXILATE Take 150 MG Capsule by mouth 2 times daily FAMOTIDINE 20 MG / 1 Tablet by mouth daily Refresh Soln ophthalmic solution 1.4-0.6 % / Apply 1 drop to eye drops as necessary 3 times daily Diclofenac Sodium - Diclofenac Sodium 1 % Gel / Apply 4 g to left hip, both knees, lower back, both shoulders. skin 2 times daily Do not apply external heat or occlusive dressings to application site; avoid wearing clothes or gloves for at least 10 minutes after application		
16. Nutrition: low sodium			15. Safety Measures: walker precautions, , standard precautions, medication safety, knee precautions, hip precautions, fall precautions, bleeding precautions, bathroom safety, anticoagulant precautions, ambulates with device		
18.A. Functional Limitations Ambulation,IParalysis			17. Allergies: penicillins octacosanol tbhq		
19. Mental & Pyschosocial Status: COGNITION: 0. Alert/ oriented, able to focus and shift attention, comprehends and recalls task directions independently., ANXIETY: 0. Never, SOCIAL ISOLATION: 0. Never, BEHAVIORAL ISSUES: 1. Memory deficit: failure to recognize familiar persons/places, inability to recall events of past 24 hours, significant memory loss so that supervision is required!2. Impaired decision-making: failure to perform usual ADLs or IADLs, inability to appropriately stop activities, jeopardizes safety through actions!6. Delusional, hallucinatory, or paranoid behavior, HISTORY OF DEPRESSION: No			18.B. Activities Permitted Up As Tolerated		
20. Prognosis: Fair					
22. A Rehabilitation Potential: SELF-CARE: 2. Needed Some Help - Patient needed partial assistance from another person to complete any activities., MOBILITY: 2. Needed Some Help - Patient needed partial assistance from another person to complete any activities.			22.B.Discharge Plans patient will be responsible for managing treatment		
Homebound status: Due to diagnosis of Bilateral primary osteoarthritis of hip, the patient is experiencing decreased endurance and mobility, increasing the likelihood of falls. To safely leave their home, the patient needs assistance from another person and an assistive mobility device.					
Clinical Condition <div>The patient is an 83-year-old female with a significant past medical history of gastroesophageal reflux disease (GERD), Requiring Homecare:hypertension, hyperlipidemia, coronary artery disease (CAD), dementia, delusional disorder, pre-diabetes, osteoarthritis involving multiple sites, and a history of recurrent falls, placing her at high risk for future falls. She was recently hospitalized after slipping out of bed and sustaining an injury that resulted in severe left hip and left leg pain with an inability to bear weight. Since returning home, the patient has experienced a significant decline in her functional status, with profound generalized weakness and inability to safely get out of bed without extensive assistance. The patient resides with family in a single-family home, where her daughter serves as the primary caregiver. Upon skilled nursing assessment, the patient was alert and oriented to person, place, time, and situation. She reported generalized pain rated 10/10, predominantly localized to the left hip and left leg. A message was left with the primary care provider requesting evaluation and appropriate pain management, as the patient received oxycodone during hospitalization but was discharged without a prescription for pain medication. The patient's daughter attempted to assist her with transferring out of bed; however, due to significant weakness, the patient required the assistance of two individuals to safely return to bed. Although she was able to reposition herself in bed, she consistently favored her left side because of pain and discomfort. Assessment revealed warm, intact skin overall, with dry, cracked skin noted on the left elbow. The caregiver was instructed to apply moisturizer regularly to maintain skin integrity and prevent further breakdown. Bilateral lower extremity edema was also observed, and the patient and family were educated on the importance of elevating the legs to assist with

16310143	06/30/2026	From: 06/30/2026 To: 08/28/2026	27543	217058
6. Patient's Name and Address Bennie Forrest 532 JAMESTOWN CT, EDGEWOOD, MD 21040- 4439030673			7. Provider's Name, Address and Telephone Number HomeCentris Healthcare LLC 10 Crossroads Drive, Suite 102 Owings Mills, MD 21117-8284 410-321-8448 1487113239	

edema management. No additional areas of skin breakdown were noted. Medication reconciliation was completed, and education was provided regarding medication adherence, infection prevention strategies, recognition and reporting of changes in condition, fall prevention measures, and the importance of caregiver participation while utilizing available support systems to reduce caregiver strain. Due to the patient's marked weakness, limited mobility, dependence with activities of daily living, and increased fall risk, home health aide (HHA) services are recommended to assist with personal care and promote safety within the home environment. An occupational therapy evaluation was also completed following hospitalization secondary to the recent fall. Prior to hospitalization, the patient was independent with basic self-care activities, functional transfers, and household ambulation using a rolling walker, requiring only supervision from her granddaughter during bathing. Since hospitalization, the patient has experienced a substantial decline in functional performance. Assessment revealed decreased standing balance, reduced standing tolerance, diminished bilateral upper extremity strength, decreased activity tolerance, and impaired functional mobility, all of which significantly limit her independence with self-care tasks, functional transfers, and ambulation. Skilled occupational therapy services are medically necessary to address these deficits through therapeutic exercise, balance and endurance training, transfer training, activities of daily living retraining, safety education, caregiver instruction, and adaptive strategies with the goal of maximizing functional independence, reducing fall risk, and facilitating the patient's return to her highest achievable level of function within the home environment.

PARAMETERS FOR PHYSICIAN NOTIFICATION: temperature < 95 > 100.5, heart rate < 50 > 110, respiratory rate < 8 > 22, blood pressure systolic < 90 > 169, blood pressure diastolic < 60 > 90, O2 saturation < 88 > 100, pain < 0 > 5

CAREGIVER: 1. Non-agency caregiver(s) currently provide assistance

HOSPITALIZATION RISKS: 1. History of falls (2 or more falls - or any fall with an injury - in the past 12 months), 5. Decline in mental, emotional, or behavioral status in the past 3 months, 6. Reported or observed history of difficulty complying with any medical instructions (for example, medications, diet, exercise) in the past 3 months, 7. Currently taking 5 or more medications, 8. Currently reports exhaustion

STANDING ORDERS: infection control: hygiene, proper hand washing; advance directive: plan if patient is unable to make healthcare decisions ; fall precautions: wear sensible shoes, remove home hazards, living space adequately lit, assistive devices prn; emergency preparedness: plan for prn evacuation, resumption of home health visits; Assess the patient's incision on post op day 7 and the nurse or physical therapist will remove aquacel dressing leaving OTA; if incision is draining educate pt/pcg on cleaning with normal saline and covering with dry gauze daily and as needed. Assess/Instruct Pt/Pcg: Ice to ____ x 20 minutes each hour while awake. If cold machine ordered apply 20 minutes on and 20 minutes off for 3-4 times a day. Assess/Instruct all body systems/vital signs/complications, Blood Pressure; systolic is greater than 169 mm Hg or less than 90 mm Hg; diastolic is greater than 100 mm Hg or less than 55 mm Hg, Clinician to assess comorbidities and report changes in condition to the patient's physician, Pain Rating is greater than 6 on 0-10 scale, Pulse is greater than 110 or less than 50, Respirations are greater than 22 or less than 8, SPO2: is less than 90 % at rest /with exertion, Temperature is greater than 100.5 F or less than 95.0 F, Pain Rating is greater than 6 on 0-10 scale Implement Fall Prevention Program, Instruct and educate the patient/PCG on wearing compression stockings for the next 4 weeks per discharge instructions. Instruct the pt/PCG on using the incentive spirometer 10 times every 2 hour while awake. Provide education content at patient's level of health literacy. Assess/Instruct Pt/Pcg: Safety measures to prevent injury. Assess: Musculoskeletal status. Teach Pt/Pcg to maintain appropriate wt bearing status as ordered by MD, total joint replacement precautions as applicable, Safe stair climbing skills, Safe, effective use of adaptive/assist device Assess/Instruct Pt/Pcg: Pain management measures; assess pain level, pain medication, rest, body alignment, ROM, meditation, massage. Pt/Pcg educated in pain management techniques including positioning and relaxation techniques Instruct Pt/Pcg: Medication actions, uses, frequency, dose, side effects, interactions of all new/change meds, Provide medication education,. Assess/Instruct Pt/Pcg: Safety measures to prevent injury, Therapeutic Exercise, Transfer Training Monitor surgical wound for s/s of infection, educate on s/s of concern and infection prevention to promote wound healing.

; Skin Preservation: Measures to prevent skin breakdown; pressure relief, incontinence care, nutrition, hydration ; Pain: Pain management measures; pain medication, rest, body alignment, ROM, meditation, massage ; Medications: Medication actions, uses, frequency, dose, interactions of all new/change meds Advance Directive:REFUSED

PROBLEMS IDENTIFIED ON ASSESSMENT: M1745 - Behavioral Issues, M2020 - Oral Med Management, abnormal blood pressure, M1033 - Exhaustion, M1400 - Dyspnea, frequent urination, limited strength, muscle weakness, balance deficit, Pain Interference with ADLs

PROCEDURES: coordinate/arrange caregiver support to prevent caregiver physical, emotional and mental exhaustion

TEACH PATIENT/CAREGIVER: * lifestyle modifications to manage respiratory condition including diet changes and regular exercise strategies to control shortness of breath home remedies to keep lungs

SN Goals

PATIENT-STATED GOAL: To be able to walk with an assistive device

GOALS

patient/caregiver recalls

- * how to maintain a diary to monitor effective and non-effective pain relief including documenting time of pain, rating, precipitating events, medications, treatments, and what works best to relieve pain
- * teach relaxation skills and diversional activities
- * recalls related medication(s) purpose, schedule

patient/caregiver recalls

- * lifestyle modifications to manage respiratory condition including diet changes and regular exercise
- * strategies to control shortness of breath
- * home remedies to keep lungs healthy
- * recalls related medication(s) purpose, schedule

patient/caregiver recalls

- * management of mental health condition including joining a peer group
- * maintaining regular contact with mental health professional
- * avoiding known stressors
- * controlling impulses
- * recalls related medication(s) purpose, schedule

patient/caregiver recalls

- * strategies to minimize fatigue and exhaustion including work simplification
- * energy conservation
- * lifestyle changes
- * diet
- * recalls related medication(s) purpose, schedule

patient self-administers medications as prescribed

- * recalls related medication(s) purpose, schedule
