regular, soft			no known allergies		
18.A. Functional Limitations			18.B. Activities Permitted		
Paralysis			No Restrictions		
19. Mental & Pyschosocial Status: COGNITION: 4. Is totally dependent in toileting., ANXIETY: , SOCIAL ISOLATION: 0 Dependent, BEHAVIORAL ISSUES: 2 independent, HISTORY OF DEPRESSION:					
20. Prognosis: fair					
22. A Rehabilitation Potential:			22.B. Discharge Plans		
SELF-CARE: Non-pitted, bilateral lower extremity , MOBILITY: N/A			family/caregiver will be responsible for managing treatment		
Homebound status: Due to diagnosis of Hemiplegia and hemiparesis following cerebral infarction affecting right dominant side, the patient is experiencing decreased endurance and mobility, increasing the likelihood of falls. To safely leave their home, the patient needs assistance from another person and an assistive mobility device.					
Clinical Condition Requiring Homecare: The patient is a 67-year-old female with a significant past medical history including HIV, hypertension, tobacco use, and prior cerebrovascular accident (CVA) complicated by dysphagia. She was recently hospitalized following a stroke and subsequently discharged to a skilled nursing facility (Autumn Lake Summit Park) for continued care. As of 03/24, the patient has returned home and is currently being cared for by her mother and niece. She resides in a single-family home with her mother, niece, and son, who has cerebral palsy. The patient's living area is located in the basement, which requires navigating multiple steps; however, a stair lift is available to facilitate safe access between levels. At present, the patient is fully dependent for all activities of daily living due to right-sided hemiplegia and aphasia. She is non-ambulatory and utilizes a wheelchair for mobility. Durable medical equipment in the home includes a hospital bed and a Hoyer lift to assist with transfers. The patient is incontinent of both bowel and bladder and is unable to utilize a bedside commode, requiring comprehensive caregiver support for toileting and hygiene needs. The current plan of care focuses on maintaining safety, preventing complications related to immobility and incontinence, and supporting the patient's functional status through caregiver assistance and appropriate use of adaptive equipment. Continued monitoring and caregiver education are essential to ensure proper management of the patient's complex medical and functional needs. Date of Order 06/03/2026 Orders Physician Face-to-Face Date: 03/23/2026 Clinical Condition Requiring Home Care per Certifying Physician: SKILLED NURSING: Disease and Medication Management, PT/OT: Evaluation and Treatment due to Hemiplegia and hemiparesis following cerebral infarction affecting right dominant side Homebound Status per Certifying Physician: patient requires another person or medical equipment such as crutches, a walker, or a wheelchair to leave home 4 - Recertification Notes: Patient is a 68 year old woman who can benefit from continued OT services to address ADLs, upper extremity muscle strength/rom and bed mobility task. She is limited secondary to cva with right sided hemiplegia. She is limited prom of the right arm which makes it difficult to perform adls and bed mobility task. She demonstrates 3+/5 mmt of the left upper extremity. She is bed bound and is max assistance for bed mobility and dependent/max assistance for ADLs. Physician Ghiorzi, Thomas
