14. DME and Supplies: wound care supplies, walker, , hand held shower, diabetic supplies				15. Safety Measures: diabetic precautions, fall precautions, standard precautions, medication safety, walker precautions, smoke detectors , emergency phone # clearly displayed, , anticoagulant precautions, ambulates with device		
16. Nutrition: Z. NO PHYSICIAN-ORDERED DIET				17. Allergies: capsicum penicillin nsaisd basaglar		
18.A. Functional Limitations Endurance, Ambulation, Bowel/Bladder Incontinence				18.B. Activities Permitted Transfer bed/Chair, Exercises Prescribed, Walker, Partial Weight Bearing		
19. Mental & Pyschosocial Status:		COGNITION: 1. Requires prompting (cuing, repetition, reminders) only under stressful or unfamiliar conditions., ANXIETY: 1. In new or complex situations only, SOCIAL ISOLATION: 0. Never, BEHAVIORAL ISSUES: 2. Impaired decision-making: failure to perform usual ADLs or IADLs, inability to appropriately stop activities, jeopardizes safety through actions, HISTORY OF DEPRESSION: No				
20. Prognosis:		Good				
22. A Rehabilitation Potential: SELF-CARE: 2. Needed Some Help - Patient needed partial assistance from another person to complete any activities., MOBILITY: 3. Independent - Patient completed all the activities by him/herself, with or without an assistive device, with no assistance from a helper.				22.B.Discharge Plans family/caregiver will be responsible for managing treatment		
Homebound status:		Due to diagnosis of Other complications of amputation stump, the patient is experiencing decreased endurance and mobility, increasing the likelihood of falls. To safely leave their home, the patient needs assistance from another person and an assistive mobility device.				
Clinical Condition Requiring Homecare:		Skilled nursing admission was completed for an 83-year-old female recently discharged from the hospital following treatment for an infected right toe amputation site. Her past medical history is significant for atrial fibrillation, chronic kidney disease, diabetes mellitus, glaucoma, hypertension, and cerebrovascular accident (stroke). The patient returned home with physician-ordered home health services for skilled nursing assessment, wound care, and disease management. Upon assessment, the patient was alert and oriented to person and place with intermittent orientation to time (A&O x2-3). Vital signs were obtained and remained stable. The patient ambulates with a walker and requires assistance with mobility due to generalized weakness, impaired balance, and an increased risk for falls. Assessment of the right foot wound revealed no signs or symptoms of infection, including no increased erythema, warmth, swelling, or purulent drainage. Wound care was performed in accordance with physician orders, and the patient tolerated the procedure without difficulty. A comprehensive medication review was completed, and medication management was reinforced, emphasizing adherence to prescribed medications and the importance of reporting any adverse effects or concerns to the physician. Skilled education was provided regarding infection prevention, including proper hand hygiene, recognition of signs and symptoms of wound infection, and when to notify the physician of any changes in the wound. Fall prevention education included the consistent use of the walker, maintaining clutter-free walkways, wearing non-slip footwear, and changing positions slowly to reduce the risk of falls. Diabetes management education focused on routine blood glucose monitoring, medication compliance, adherence to a diabetic diet, daily foot inspections, and maintaining optimal glycemic control to promote wound healing. Due to cognitive deficits, reinforcement of education remains necessary, although the patient demonstrated understanding of the teaching provided. Skilled nursing services remain medically necessary for ongoing comprehensive assessment, wound care, medication management, disease process education, and continued monitoring to promote wound healing, prevent infection, reduce fall risk, and avoid hospitalization. A scheduled therapy evaluation was not completed because the patient declined the evaluation, reporting a planned admission to Mercy Hospital the following day for a leg amputation. Therapy services will remain on hold pending hospitalization, and new physician orders will be obtained following hospital discharge before resuming home health therapy services, as appropriate. Date of Order >07/10/2026 Orders Physician Face-to-Face Date: 06/22/2026 Clinical Condition Requiring Home Care per Certifying Physician: sn-disease management pt-eval & treat ot-eval & treat due to Other complications of amputation stump Homebound Status per Certifying Physician: patient requires another person or medical equipment such as crutches, a walker, or a wheelchair to leave home 1 - SOC - SN Notes: soc
