8. DOB 10/27/1946			9. Sex Female	
11. ICD 10 Z47.1			10. Medications: Dose/Frequency/Route (N)ew (C)hanged	
Principal Diagnosis			Nephro-Vite - Alpha-Tocopherol Acetate: Ascorbic Acid: Biotin:	
Aftercare following joint replacement surgery			Cholecalciferol: Cyanocobalamin: Dexpanthenol: Folic Acid: Niacinamide:	
Date 07/12/26			Pyridox 0.8mg; 1 tab by mouth in the morning supplement	
13. ICD 10 Z96.651			Oxycodone - Ibuprofen: Oxycodone Hydrochloride 5mg; 1 tab by mouth	
Other Pertinent Diagnoses			every 4 hours as needed for pain	
Presence of right artificial knee joint			Trazadone - Trazodone Hydrochloride 50mg; 1 tab by mouth at bedtime for	
M17.12 Unilateral primary osteoarthritis left knee			insomnia	
I12.9 Hypertensive chronic kidney disease w stg 1-4/unsp chr			Acetaminophen - Acetaminophen 500mg; 2 tabs by mouth every 8 hours for	
kdny			pain	
E11.22 Type 2 diabetes mellitus w diabetic chronic kidney disease			ASPIRIN 0 DR 81 MG / 1 Tablet by mouth twice a day dvt prophylaxis	
N18.4 Chronic kidney disease stage 4 (severe)			LIPITOR eq 10 mg base 10 MG / 1 Tablet by mouth daily cholesterol	
I35.0 Nonrheumatic aortic (valve) stenosis			Carvedilol - Carvedilol 3.125 mg 3.125mg; 1 tab by mouth twice a day HTN	
E11.319 Type 2 diabetes w unsp diabetic rtnop w/o macular edema			Cephalexin - Cephalexin eq 500 mg base 500MG; 1CAP by mouth every 8	
E78.5 Hyperlipidemia unspecified			hours FOR RIGHT KNEE SURGICAL WOUND INFECTION LAST DOSE 7/13/26	
I70.0 Atherosclerosis of aorta			Colace - Docusate Sodium 100MG; 1 CAP by mouth every 12 hours AS	
G47.00 Insomnia unspecified			NEEDED FOR CONSTIPATION	
E66.9 Obesity unspecified			Glipizide - Glipizide 10 mg 10MG; 1 TAB by mouth in the morning DM2	
Z68.38 Body mass index [BMI] 38.0-38.9 adult			Glipizide - Glipizide 5 mg 5MG; 1 TAB by mouth at bedtime DM2	
Z79.84 Long term (current) use of oral hypoglycemic drugs			Hydralazine - Hydralazine Hydrochloride 25MG; 1 TAB by mouth once a day	
Z79.85 Lng trm (crnt) use injectable non-insulin antidiabetic drugs			HTN	
Z79.82 Long term (current) use of aspirin			JARDIANCE 25 mg/tablet / Take half tablet by mouth once a day DM2	
Z90.710 Acquired absence of both cervix and uterus			Losartan Potassium - Losartan Potassium 100 mg 100MG; 1 TAB by mouth	
Z87.01 Personal history of pneumonia (recurrent)			once a day HTN	
			semaglutide (OZEMPIC) 0.25 mg or 0.5 mg (2 mg/3 mL) SubQ Pen Injector	
			Inject 0.25 mg subcutaneous once a week every 7 days	
14. DME and Supplies:			15. Safety Measures:	
grab bars, wheelchair, bath bench, walker, cane			standard precautions, knee precautions, fall precautions, bleeding	
			precautions, ambulates with device, walker precautions, medication safety,	
			transfer with assist, supervision at all times, anticoagulant precautions,	
			activity supervision	
16. Nutrition:			17. Allergies:	
low cholesterol, low sodium, diabetic, ,			lisinopril	
18.A. Functional Limitations			18.B. Activities Permitted	
Endurance, Ambulation			Cane, Walker, Exercises Prescribed, Up As Tolerated	
19. Mental & Psychosocial Status: COGNITION: 0. Alert/ oriented, able to focus and shift attention, comprehends and recalls task directions independently., ANXIETY: 1. In new or complex situations only, SOCIAL ISOLATION: 0. Never, BEHAVIORAL ISSUES: 7. None of the above behaviors demonstrated, HISTORY OF DEPRESSION: No				
20. Prognosis: Fair				
22. A Rehabilitation Potential:			22.B. Discharge Plans	
SELF-CARE: 2. Needed Some Help - Patient needed partial assistance from another person to complete any activities., MOBILITY: 2. Needed Some Help - Patient needed partial assistance from another person to complete any activities.			family/caregiver will be responsible for managing treatment	
			patient will be responsible for managing treatment	
Homebound status: After undergoing Right total knee replacement, the patient is experiencing decreased endurance and mobility, increasing the likelihood of falls. To safely leave their home, the patient needs assistance from another person and an assistive mobility device.				
Clinical Condition <div>The patient is a 79-year-old female referred to home health services following a right total knee replacement performed on 06/18. Her postoperative course was complicated by acquired right lower lobe pneumonia and elevated blood glucose levels, requiring hospitalization and discharge to a skilled nursing facility prior to returning home. Her past medical history is significant for bilateral knee osteoarthritis, aftercare following joint replacement surgery, type 2 diabetes mellitus, chronic kidney disease stage 4, essential hypertension, hyperlipidemia, morbid obesity, insomnia, chronic right knee pain, and the presence of a right artificial knee joint. The patient resides alone, with two sons living nearby who provide transportation, grocery shopping, and assistance with laundry. Family members assist with activities of daily living (ADLs) and instrumental activities of daily living (IADLs) as needed. During the Skilled Nursing assessment, the patient was alert and oriented 3 and ambulating with a rolling walker for safety. She reported right knee pain rated 4/10 and had taken acetaminophen (Tylenol) prior to the visit with adequate relief. She denied shortness of breath, although auscultation revealed diminished breath sounds in the right lower lobe consistent with her recent diagnosis of pneumonia. The patient reported a good appetite, her last bowel movement occurred the previous day, and she complained of frequent urination. Assessment revealed bilateral lower extremity +2 edema. Inspection of the right knee surgical incision demonstrated a closed incision measuring 16.0 cm in length with scab formation and mild surrounding erythema. No drainage or other signs of wound complications were observed. The patient continues treatment with Glipizide, Jardiance, and weekly Ozempic for diabetes management. Skilled Nursing reviewed all medications, including indications, dosages, administration schedules, and potential side effects. Education was also provided regarding proper closed incision care, effective pain management techniques, blood glucose monitoring, recognition of signs and symptoms of infection, edema management, fall prevention, and the importance of medication adherence. The patient and caregiver verbalized understanding of all teaching provided. Skilled Nursing services are ordered at a frequency of one visit weekly for two weeks (1W2) to provide ongoing assessment, cardiopulmonary monitoring, wound surveillance, medication management, and continued patient education. A Physical Therapy evaluation revealed postoperative weakness and delayed functional recovery following discharge from the skilled nursing facility. The patient demonstrates right lower extremity weakness, decreased right knee range of motion, impaired balance, reduced endurance, altered gait mechanics, and an increased risk for falls. She requires the use of a rolling walker for safe ambulation and continues to experience limitations in transfers and functional mobility. Skilled Physical Therapy is medically necessary to address lower extremity strengthening, therapeutic exercise, range of motion restoration, gait training, balance training, stair negotiation, transfer safety, endurance training, fall prevention, and progression toward her prior level of function. An Occupational Therapy evaluation further identified deficits in self-care and functional independence. The patient currently requires standby to minimal assistance with basic activities of daily living				
23. Signature and Date of Verbal SOC Where Applicable:				25. Date HHA Received Signed POT
Electronically Signed by Messick, Charles RN on 07/12/2026				
24. Physician's Name and Address			26. I certify/recertify that this patient is confined to his/her home and needs intermittent skilled nursing care, physical therapy and/or speech therapy or continues to need occupational therapy. The patient is under my care, and I have authorized the services on this plan of care and will periodically review the plan.

and continues to rely on family support for instrumental activities of daily living. Functional limitations related to postoperative pain, decreased standing tolerance, impaired balance, reduced activity tolerance, and generalized weakness negatively impact her ability to safely perform daily tasks. Skilled Occupational Therapy is medically necessary to improve independence with ADLs, increase standing tolerance and endurance, implement energy conservation and safety strategies, recommend adaptive techniques and equipment as appropriate, and reduce fall risk to maximize the patient's functional independence and support a safe recovery at home. The interdisciplinary plan of care includes ongoing Skilled Nursing, Physical Therapy, and Occupational Therapy services to monitor recovery, manage chronic comorbidities, promote wound healing, improve functional mobility, restore independence, and reduce the risk of complications and rehospitalization.

Order: 07/12/2026

Orders: Physician Face-to-Face Date: 07/01/2026

Clinical Condition Requiring Home Care per Certifying Physician: SN-pain control PT-eval & treat due to Right total knee replacement

Homebound Status per Certifying Physician: patient requires another person or medical equipment such as crutches, a walker, or a wheelchair to leave home

PARAMETERS FOR PHYSICIAN NOTIFICATION: temperature < 95 > 100.5, heart rate < 50 > 110, respiratory rate < 8 > 22, blood pressure systolic < 90 > 169, blood pressure diastolic < 60 > 90, O2 saturation < 88 > 100, pain < 0 > 5

CAREGIVER: 1. Non-agency caregiver(s) currently provide assistance

HOSPITALIZATION RISKS: 3. Multiple hospitalizations (2 or more) in the past 6 months, 7. Currently taking 5 or more medications, 8. Currently reports exhaustion, 9. Other risk(s) not listed in 1- 8

STANDING ORDERS: infection control: hygiene, proper hand washing; advance directive: plan if patient is unable to make healthcare decisions ; fall precautions: wear sensible shoes, remove home hazards, living space adequately lit, assistive devices prn; emergency preparedness: plan for prn evacuation, resumption of home health visits; Assess the patient's incision on post op day 7 and the nurse or physical therapist will remove aquacel dressing leaving OTA; if incision is draining educate pt/pcg on cleaning with normal saline and covering with dry gauze daily and as needed. Assess/Instruct Pt/PCg: Ice to ____ x 20 minutes each hour while awake. If cold machine ordered apply 20 minutes on and 20 minutes off for 3-4 times a day. Assess/Instruct all body systems/vital signs/complications, Blood Pressure; systolic is greater than 169 mm Hg or less than 90 mm Hg; diastolic is greater than 100 mm Hg or less than 55 mm Hg, Clinician to assess comorbidities and report changes in condition to the patient's physician, Pain Rating is greater than 6 on 0-10 scale, Pulse is greater than 110 or less than 50, Respirations are greater than 22 or less than 8, SPO2: is less than 90 % at rest /with exertion, Temperature is greater than 100.5 F or less than 95.0 F, Pain Rating is greater than 6 on 0-10 scale Implement Fall Prevention Program, Instruct and educate the patient/PCG on wearing compression stockings for the next 4 weeks per discharge instructions. Instruct the pt/PCG on using the incentive spirometer 10 times every 2 hour while awake. Provide education content at patient's level of health literacy. Assess/Instruct Pt/PCg: Safety measures to prevent injury. Assess: Musculoskeletal status. Teach Pt/PCg to maintain appropriate wt bearing status as ordered by MD, total joint replacement precautions as applicable, Safe stair climbing skills, Safe, effective use of adaptive/assist device Assess/Instruct Pt/PCg: Pain management measures; assess pain level, pain medication, rest, body alignment, ROM, meditation, massage. Pt/PCg educated in pain management techniques including positioning and relaxation techniques Instruct Pt/PCg: Medication actions, uses, frequency, dose, side effects, interactions of all new/change meds, Provide medication education,. Assess/Instruct Pt/PCg: Safety measures to prevent injury, Therapeutic Exercise, Transfer Training Monitor surgical wound for s/s of infection, educate on s/s of concern and infection prevention to promote wound healing.

; Skin Preservation: Measures to prevent skin breakdown; pressure relief, incontinence care, nutrition, hydration ; Pain: Pain management measures; pain medication, rest, body alignment, ROM, meditation, massage ; Medications: Medication actions, uses, frequency, dose, interactions of all new/change meds Advance Directive:No Advance Directive

PROBLEMS IDENTIFIED ON ASSESSMENT: M2020 - Oral Med Management, meal preparation, lung sounds not clear, dependent edema, M1033 - Exhaustion, M1400 - Dyspnea, limited range of motion, swelling of affected area, limited endurance, limited strength, balance deficit, Pain Interference with Therapy activities, Pain Interference with ADLs, obesity, swell/redness surround. skin, #1 - Other - Anterior Right Knee - OPEN TO AIR

PROCEDURES: physician-ordered wound care: #1 - Other - Anterior Right Knee - OPEN TO AIR: RIGHT KNEE OPEN TO AIR, cough/deep breathing exercises

TEACH PATIENT/CAREGIVER: * lifestyle modifications to manage respiratory condition including diet changes and regular exercise strategies to control shortness of breath home remedies to keep lungs healthy, related medication(s) purpose, schedule, * how to maintain a diary to monitor effective and non-effective pain relief including documenting time of pain, rating, precipitating events, medications, treatments, and what works best to relieve pain teach relaxation skills and diversional activities, related medication(s) purpose, schedule, * how to achieve wound healing including
