14. DME and Supplies: bath bench, commode, hooyer lift, wheelchair			15. Safety Measures: supervision at all times, transfer with assist, wheelchair precautions, medication safety, fall precautions, bleeding precautions, cardiac precautions, bathroom safety, activity supervision		
16. Nutrition: Z. NO PHYSICIAN-ORDERED DIET			17. Allergies: penicillin, Lactose		
18.A. Functional Limitations Ambulation			18.B. Activities Permitted Up As Tolerated		
19. Mental & Pyschosocial Status:			COGNITION: 3. Requires considerable assistance in routine situations. Is not alert and oriented or is unable to shift attention and recall directions more than half the time., ANXIETY: 4. Constantly, SOCIAL ISOLATION: 8. Patient unable to respond, BEHAVIORAL ISSUES: 1. Memory deficit: failure to recognize familiar persons/places, inability to recall events of past 24 hours, significant memory loss so that supervision is required!2. Impaired decision-making: failure to perform usual ADLs or IADLs, inability to appropriately stop activities, jeopardizes safety through actions, HISTORY OF DEPRESSION: Yes		
20. Prognosis: fair					
22. A Rehabilitation Potential: SELF-CARE: 1. Dependent - A helper completed all the activities for the patient., MOBILITY: 1. Dependent - A helper completed all the activities for the patient.			22.B.Discharge Plans family/caregiver will be responsible for managing treatment		
Homebound status: Due to diagnosis of Pressure ulcer of sacral region stage 4, the patient is experiencing decreased endurance and mobility, increasing the likelihood of falls. To safely leave their home, the patient needs assistance from another person and an assistive mobility device					
Clinical Condition Requiring Homecare:		<p class="MsoNoSpacing">The patient is an 80-year-old female with a significant medical history including CVA, Crohn's disease, dementia (Alzheimer's type), depression, hypertension, anemia, osteoarthritis, malnutrition, and other comorbidities, recently admitted to home health following a brief stay in a skilled nursing facility after a right hip fracture treated with ORIF on 02/27/2026. Upon arrival, the patient was lying in a hospital bed; per caregiver report, she had tolerated sitting in a chair for 45 minutes and was able to stand with assistance for transfers. She was alert and oriented to self and place, initially exhibiting agitation that improved during the visit, and demonstrated intermittent confusion and hallucinations. She denied pain initially but later reported knee discomfort, denied shortness of breath, and physical assessment revealed clear lungs, audible bowel sounds, no edema, and normal capillary refill; vital signs were stable (98.2F, SpO 93%, HR 91, BP 92/54). The patient has a stage 4 sacral pressure ulcer measuring approximately 4.5 cm 4 cm 2.3-3 cm with a beefy red wound bed and no slough or purulent drainage; dressing was changed, and education on pressure offloading and limiting wheelchair time was provided. She presents with deficits in bed mobility, transfers, and standing balance, requiring minimal to moderate assistance, and ambulation could not be fully assessed; she is weight-bearing as tolerated on the right lower extremity per orthopedic follow-up. The patient lives with her husband in a two-story home with stairs, receives weekday CNA support for wound care, and additional assistance from her niece for ADLs. Medication concerns were identified, and education was initiated, with the family demonstrating a need for further instruction. The patient was admitted to home health services with fair rehabilitation potential and would benefit from continued skilled nursing and physical therapy to address functional deficits and ongoing care needs.</p><p class="MsoNoSpacing"></p><p class="MsoNoSpacing">Date of Order</p><p class="MsoNoSpacing">04/23/2026
