SELF-CARE: 2. Needed Some Help - Patient needed partial assistance from another person to complete any activities., MOBILITY: 2. Needed Some Help - Patient needed partial assistance from another person to complete any activities.				patient will be responsible for managing treatment family/caregiver will be responsible for managing treatment	
Homebound status:		Due to diagnosis of Traumatic subdural hemorrhage with a loss of consciousness of 30 minutes or less, the patient is experiencing decreased endurance and mobility, increasing the likelihood of falls. To safely leave their home, the patient needs assistance from another person and an assistive mobility device.			
Clinical Condition <div>The patient is a 75-year-old male admitted to home health services following a recent discharge from a rehabilitation facility, Requiring Homecare:where he spent several months recovering after a fall resulting in a traumatic subdural hematoma (SDH) with loss of consciousness. His significant past medical history includes diet-controlled type 2 diabetes mellitus with chronic kidney disease, history of urinary tract infection, traumatic subdural hematoma, vitamin D deficiency, history of pulmonary embolism, recurrent falls, nicotine use history, anemia, and prior amputation of three toes on the left foot. The patient is currently staying with his sister, Denise, who serves as his primary caregiver, in a basement apartment. The patient is considered homebound due to his history of falls, need for supervision for safety, impaired functional mobility, and the considerable and taxing effort required to leave the home. His goal for home health is to improve his physical function and mobility and to walk more normally. Start-of-care consent was reviewed and signed by the patient with understanding, and the patient and caregiver agreed with the plan of care. At the start-of-care assessment, the patient denied pain and reported no recent falls or urinary discomfort. His last bowel movement was yesterday. He experiences occasional urinary incontinence and wears pull-ups for management. Vital signs were stable, and no abnormal lung sounds were noted. No open wounds were identified. The skin of the lower extremities was noted to be dry, with dependent edema present. The left foot has a history of amputation of three toes. The patient was instructed to elevate his legs while sitting to assist with edema management and to apply lotion as prescribed to dry and cracked skin. The caregiver was educated regarding the potential use of support stockings for edema reduction, as appropriate. The patient also has anemia and was educated regarding dietary sources of iron. He reports allergies and uses Flonase for symptom relief. Medication review was completed, and high-risk medications were identified. The nurse contacted the pharmacy after learning that prescriptions had reportedly been called in but that a faxed prescription had not been received by Walgreens at Quarry Lake. The medications requiring pickup were reported to be over-the-counter medications, and the patient's sister planned to obtain them. The patient has a scheduled PCP appointment the following day and was instructed to bring his written medication information to the appointment for provider review and reconciliation. The patient and caregiver verbalized agreement with this plan. Physical therapy evaluation was completed. The patient demonstrates mild functional mobility deficits following his prolonged rehabilitation stay, including decreased strength, impaired posture, and reduced functional endurance. He ambulates approximately 40 feet twice on indoor level surfaces without an assistive device and with supervision, demonstrating increased trunk flexion. Outdoors, he is able to ambulate approximately one block over uneven concrete without an assistive device with close supervision and continued trunk flexion. He negotiates seven steps using a railing with supervision to exit the residence. Bed mobility is independent, while transfers to the bed, chair, and toilet require supervision for safety. Car-transfer ability was not assessed. The patient tolerated 10 repetitions of a comprehensive therapeutic exercise program including supine hip flexion, bridging, straight-leg raises, hip abduction, standing knee flexion, standing hip abduction, standing hip extension, plantarflexion, squats, seated knee extension, and ankle pumps. His Tinetti score is 23/28, reflecting an increased fall risk in the context of his recent fall history, SDH, impaired posture, and need for supervision. Skilled home PT is indicated to improve strength, postural control, balance, endurance, and functional mobility, with emphasis on safe gait, transfers, stair negotiation, fall prevention, and progression toward greater independence. Occupational therapy evaluation was also completed. The patient presents with mildly decreased independence with basic activities of daily living and requires supervision for transfers to ensure safety. He is able to perform shower transfers with modified independence using available grab rails. Significant bilateral upper-extremity range-of-motion and strength deficits were identified, which contribute to limitations with functional tasks and instrumental activities of daily living. The patient also reports poor appetite and becoming fatigued easily, indicating decreased overall endurance and activity tolerance. Skilled OT services are recommended to improve bilateral upper-extremity strength and range of motion, endurance, standing tolerance, ADL performance, transfer safety, and ability to safely participate in IADLs. The patient would benefit from continued interdisciplinary home health services focused on strengthening, functional mobility, fall prevention, safety awareness, energy conservation, and maximizing independence in the home environment. Skilled nursing is ordered at a frequency of one visit every other week for six weeks, with PT and OT services included in

SN Careplans

SN WK1: 1 (08/26/26-08/29/26) ,WK3: 1 (09/06/26-09/12/26) ,WK5: 1 (09/20/26-09/26/26) ,WK7: 1 (10/04/26-10/10/26) ,WK9: 1 (10/18/26-10/24/26)

PARAMETERS FOR PHYSICIAN NOTIFICATION: temperature < 95 > 100.5, heart rate < 50 > 110, respiratory rate < 8 > 22, blood pressure systolic < 90 > 169, blood pressure diastolic < 60 > 90, O2 saturation < 88 > 100, pain < 0 > 5

CAREGIVER: 2. Non-agency caregiver(s) need training/supportive services to provide assistance

HOSPITALIZATION RISKS: 1. History of falls (2 or more falls - or any fall with an injury - in the past 12 months), 2. Unintentional weight loss of a total of 10 pounds or more in the past 12 months, 6. Reported or observed history of difficulty complying with any medical instructions (for example, medications, diet, exercise) in the past 3 months, 7. Currently taking 5 or more medications

STANDING ORDERS: infection control: hygiene, proper hand washing; advance directive: plan if patient is unable to make healthcare decisions ; fall precautions: wear sensible shoes, remove home hazards, living space adequately lit, assistive devices prn; emergency preparedness: plan for prn evacuation, resumption of home health visits; Skin Preservation: Measures to prevent skin breakdown; pressure relief, incontinence care, nutrition, hydration ; Pain: Pain management measures; pain medication, rest, body alignment, ROM, meditation, massage ; Medications: Medication actions, uses, frequency, dose, interactions of all new/change meds ; Assess the patient's incision on post op day 7 and the nurse or physical therapist will remove aquacel dressing leaving OTA; if incision is draining educate pt/pcg on cleaning with normal saline and covering with dry gauze daily and as needed.

Assess/Instruct Pt/Pcg: Ice to ____ x 20 minutes each hour while awake. If cold machine ordered apply 20 minutes on and 20 minutes off for 3-4 times a day.

Assess/Instruct all body systems/vital signs/complications, Blood Pressure; systolic is greater than 169 mm Hg or less than 90 mm Hg; diastolic is greater than 100 mm Hg or less than 55 mm Hg, Clinician to assess comorbidities and report changes in condition to the patient's physician, Pain Rating is greater than 6 on 0-10 scale, Pulse is greater than 110 or less than 50, Respirations are greater than 22 or less than 8, SPO2: is less than 90 % at rest /with exertion, Temperature is greater than 100.5 F or less than 95.0 F, Pain Rating is greater than 6 on 0-10 scale

Implement Fall Prevention Program, Instruct and educate the patient/PCG on wearing compression stockings for the next 4 weeks per discharge instructions.

Instruct the pt/PCG on using the incentive spirometer 10 times every 2 hour while awake.

Provide education content at patient's level of health literacy.

Assess/Instruct Pt/Pcg: Safety measures to prevent injury.

Assess: Musculoskeletal status.

Teach Pt/PCg to maintain appropriate wt bearing status as ordered by MD, total joint replacement precautions as applicable, Safe stair climbing skills, Safe, effective use of adaptive/assist device

Assess/Instruct Pt/Pcg: Pain management measures; assess pain level, pain medication, rest, body alignment, ROM, meditation, massage.

Pt/PCg educated in pain management techniques including positioning and relaxation techniques

Instruct Pt/PCg: Medication actions, uses, frequency, dose, side effects, interactions of all new/change meds, Provide medication education,.

Assess/Instruct Pt/Pcg: Safety measures to prevent injury, Therapeutic Exercise, Transfer Training

Monitor surgical wound for s/s of infection, educate on s/s of concern and infection prevention to promote wound healing.

No open wounds noted

Advance Directive:SEE MOLST

SN Goals

PATIENT-STATED GOAL: To get to to my physical, not walk like a 75-year-old

GOALS

patient/caregiver recalls

- * lifestyle modifications to manage respiratory condition including
- * diet changes and regular exercise
- * strategies to control shortness of breath
- * home remedies to keep lungs healthy
- * recalls related medication(s) purpose, schedule

patient/caregiver recalls

- * management of mental health condition including joining a peer group
- * maintaining regular contact with mental health professional
- * avoiding known stressors
- * controlling impulses
- * recalls related medication(s) purpose, schedule

patient/caregiver recalls

- * strategies to increase caloric intake
- * recalls related medication(s) purpose, schedule

patient self-administers medications as prescribed

- * recalls related medication(s) purpose, schedule

patient is adequately supervised

patient/caregiver recalls

- * prevention including increase fluid intake
- * increase Vitamin C intake to promote acidic bladder environment (cranberry juice)
- * perineal hygiene
- * recalls related medication(s) purpose, schedule

meal preparation is available to patient for all meals

patient/caregiver recalls

- * urinary incontinence management including bladder training
- * Kegel exercises
- * skin care
- * recalls related medication(s) purpose, schedule

caregiver administers and/or packages medications appropriately

caregiver performs medical/rehabilitation treatments with adequate competence
